Models Of Nature:

Cultural Models of Nature Giovanni Bennardo, 2019-03-19 Drawing on the ethnographic experience of the contributors this volume explores the Cultural Models of Nature found in a range of food producing communities located in climate change affected areas. These Cultural Models represent specific organizations of the etic categories underlying the concept of Nature i.e. plants, animals, the physical environment, the weather, humans and the supernatural. The adoption of a common methodology across the research projects allows the drawing of meaningful cross cultural comparisons between these communities. The research will be of interest to scholars and policymakers actively involved in research and solution providing in the climate change arena.

Modeling Nature Sharon E. Kingsland, 1995-10-16 The first history of population ecology traces two generations of science and scientists from the opening of the twentieth century through 1970. Kingsland chronicles the careers of key figures and the field's theoretical, empirical and institutional development, with special attention to tensions between the descriptive studies of field biologists and later mathematical models. This second edition includes a new afterword that brings the book up to date with special attention to the rise of the new natural history and debates about ecology's future as a large scale scientific enterprise.

Nature and Therapy Martin Jordan, 2014-09-15

Recent decades have seen an increasing interest in the healing and therapeutic potential of nature and interest in the potential of greencare interventions for the benefit of mental health. The field of nature based therapies is expanding in line with this interest. *Nature and Therapy* offers a unique contribution by outlining the specific processes involved in conducting counselling and psychotherapy sessions in outdoor natural environments. Central areas covered in the book include: A thorough exploration of the evidence for the psychological and healing potential of natural spaces; Developing a therapeutic rationale for nature based therapeutic work; Understanding the therapeutic relationship and the unique therapeutic processes that come into play in outdoor natural spaces; Translating indoor therapeutic work to outdoor contexts; The practicalities of setting up and running a therapy session outside of a room environment; Experiential exercises to explore the therapeutic potential of nature. Martin Jordan offers a clear outline of how to set up and hold a therapeutic session outdoors. Using case examples, *Nature and Therapy* explores both the practicalities and the therapeutic processes that come into play in an outdoor natural setting. The book will be of use to counsellors, psychotherapists, arts therapists, psychologists and health professionals who are interested in taking their therapeutic work into natural environments and outdoor spaces.

Modelling Nature: An Opinionated Introduction to Scientific Representation Roman Frigg,James Nguyen,2021-09-03 This monograph offers a critical introduction to current theories of how scientific models represent their target systems Representation is important because it allows scientists to study a model to discover features of reality The authors provide a map of the conceptual landscape surrounding the issue of scientific representation arguing that it consists of multiple intertwined problems They provide an encyclopaedic overview of existing attempts to answer these questions and they assess their strengths and weaknesses The book also presents a comprehensive statement of their alternative proposal the DEKI account of representation which they have developed over the last few years They show how the account works in the case of material as well as non material models how it accommodates the use of mathematics in scientific modelling and how it sheds light on the relation between representation in science and art The issue of representation has generated a sizeable literature which has been growing fast in particular over the last decade This makes it hard for novices to get a handle on the topic because so far there is no book length introduction that would guide them through the discussion Likewise researchers may require a comprehensive review that they can refer to for critical evaluations This book meets the needs of both groups **The Teaching of Nature Study and Elementary Science for Grades Kindergarten to Eight**
