*Optics--an Introduction for Students of Engineering* J. Warren Blaker, William M. Rosenblum, 1993-01-01

*Fundamentals of Photonics* Bahaa E. A. Saleh, Malvin Carl Teich, 2007-03-09 *Fundamentals of Photonics* A complete thoroughly updated full color second edition Now in a new full color edition *Fundamentals of Photonics* Second Edition is a self contained and up to date introductory level textbook that thoroughly surveys this rapidly expanding area of engineering and applied physics. Featuring a logical blend of theory and applications coverage includes detailed accounts of the primary theories of light including ray optics wave optics electromagnetic optics and photon optics as well as the interaction of photons and atoms and semiconductor optics. Presented at increasing levels of complexity preliminary sections build toward more advanced topics such as Fourier optics and holography guided wave and fiber optics semiconductor sources and detectors electro optic and acousto optic devices nonlinear optical devices optical interconnects and switches and optical fiber communications. Each of the twenty two chapters of the first edition has been thoroughly updated. The Second Edition also features entirely new chapters on photonic crystal optics including multilayer and periodic media waveguides holey fibers and resonators and ultrafast optics including femtosecond optical pulses ultrafast nonlinear optics and optical solitons. The chapters on optical interconnects and switches and optical fiber communications have been completely rewritten to accommodate current technology. Each chapter contains summaries highlighted equations exercises problems and selected reading lists. Examples of real systems are included to emphasize the concepts governing applications of current interest.

*Introduction to Modern Optics for Students in Engineering and Applied Science* Stephen Arnold, Kaitlynn

Snyder, 2018-08-21 The following is a text taught to engineering and applied science students at the NYU Tandon Polytechnic School of Engineering in 2017 and 2018. The course met for four hours a week during one fourteen week semester. Unlike other texts in Modern Optics this text is intended to be used by students in both engineering and applied science at a junior or senior level and to support specialized interdisciplinary applied optics courses given at a graduate level such as Bio Optics. By introducing it in the junior year students with interest arrive fresh from their introductory physics courses. The course emphasizes fundamentals starting with Maxwell's equations which is where the introductory physics sequence ends and applies these fundamentals to current interests in applied science and technology. Appropriate to the level of the course the mathematics represents Maxwell's Equations in their integral form. Where advanced math was added e.g. Fourier Transform the students were introduced to this as if taught in an applied math course. Take home Experiments There are also take home laboratory experiment assignments dispersed within the text and requiring a small inventory of parts e.g. transmission diffraction grating red laser pointer aspheric lens 1 diameter acrylic sphere and dye solution. With these parts and common things found around a typical home 9 experiments are assigned to support the concepts taught in the course. One of these involves turning a Smart phone into a microscope. Another turns a Smart phone into a spectrometer and a third uses the

phone as a photometer Applications Some of the many applications discussed are Optical Tweezers Holographic Diffraction Grating Demystifying the structure of DNA from Rosalind Franklin's X ray diffraction image Photo 51 Fourier Transform Infrared Spectroscopy FTIR nano plasmonics Fabry Perot resonator Whispering Gallery Mode sensor LASER Confocal microscope and Super high resolution microscopy STED
