

Ordinary Differential Equation

An ordinary differential equation (frequently called an "ODE," "diff eq," or "diffy Q") is an equality involving a function and its [derivatives](#). An ODE of order n is an equation of the form

$$F(x, y, y', \dots, y^{(n)}) = 0, \quad (1)$$

where y is a function of x , $y' = d y / d x$ is the first [derivative](#) with respect to x , and $y^{(n)} = d^n y / d x^n$ is the n th [derivative](#) with respect to x .

Nonhomogeneous ordinary differential equations can be solved if the general solution to the homogenous version is known, in which case the [undetermined coefficients method](#) or [variation of parameters](#) can be used to find the particular solution.

Many ordinary differential equations can be solved exactly in the [Wolfram Language](#) using `DSolve[eqn, y, x]`, and numerically using `NDSolve[eqn, y, {x, xmin, xmax}]`.

[MATLAB Essentials: Symbolic and Numeric Problem-Solving in Engineering](#) Lester W. Schmerr, Jr., 2025-11-19 This book introduces MATLAB as a direct problem solving tool where the many built in functions and commands of MATLAB can be used to

perform even complex tasks In this mode MATLAB acts as a very advanced scientific calculator The primary purpose of this book is to teach the reader how to use the functions and commands of this calculator and when necessary how to save the problem solving steps so that the solution obtained can be re used or re evaluated under different conditions The book also introduces symbolic calculations extensively in addition to the traditional numerical methods found in other texts MATLAB was initially introduced as a numerical tool for linear algebra problems and over the years has extended those numerical capabilities significantly to many areas of science and engineering Consequently it is not surprising that most books retain a strong emphasis on numerical solutions and treat symbolic calculations only briefly if at all A key point is that while symbolic algebra can be used to solve problems symbolically it can also be used to make the formulation of problems much simpler even if the ultimate solution is found numerically Recognizing and demonstrating this important property of symbolic calculations is unique to this book Examines symbolic and numeric MATLAB tools with engineering examples of linear and nonlinear equations eigenvalue problems and differential equations

Solving ODEs with MATLAB L. F. Shampine, I. Gladwell, S. Thompson, 2003-04-28 This concise text first published in 2003 is for a one semester course for upper level undergraduates and beginning graduate students in engineering science and mathematics and can also serve as a quick reference for professionals The major topics in ordinary differential equations initial value problems boundary value problems and delay differential equations are usually taught in three separate semester long courses This single book provides a sound treatment of all three in fewer than 300 pages Each chapter begins with a discussion of the facts of life for the problem mainly by means of examples Numerical methods for the problem are then developed but only those methods most widely used The treatment of each method is brief and technical issues are minimized but all the issues important in practice and for understanding the codes are discussed The last part of each chapter is a tutorial that shows how to solve problems by means of small but realistic examples

Solving Ordinary Differential Equations I Ernst Hairer, Syvert P. Nørsett, Gerhard Wanner, 2008-04-16 This book deals with methods for solving nonstiff ordinary differential equations The first chapter describes the historical development of the classical theory and the second chapter includes a modern treatment of Runge Kutta and extrapolation methods Chapter three begins with the classical theory of multistep methods and concludes with the theory of general linear methods The reader will benefit from many illustrations a historical and didactic approach and computer programs which help him/her learn to solve all kinds of ordinary differential equations This new edition has been rewritten and new material has been included

Solving Ordinary Differential Equations II Ernst Hairer, Gerhard Wanner, 2010-03-10 Whatever regrets may be we have done our best Sir Ernest Shackleton turning back on 9 January 1909 at 88 23 South Brahms struggled for 20 years to write his first symphony Compared to this the 10 years we have been working on these two volumes may even appear short

This second volume treats stiff differential equations and differential algebraic equations. It contains three chapters: Chapter IV on one step Runge Kutta methods for stiff problems, Chapter V on multistep methods for stiff problems and Chapter VI on singular perturbation and differential algebraic equations. Each chapter is divided into sections. Usually the first sections of a chapter are of an introductory nature, explain numerical phenomena and exhibit numerical results. Investigations of a more theoretical nature are presented in the later sections of each chapter. As in Volume I the formulas, theorems, tables and figures are numbered consecutively in each section and indicate in addition the section number. In cross references to other chapters the latin chapter number is put first. References to the bibliography are again by author plus year in parentheses. The bibliography again contains only those papers which are discussed in the text and is in no way meant to be complete.

Solving Ordinary Differential Equations Application and Performance Mazen El-Masri, 2002. The purpose of this research project is to study performance of mathematical operations in software applications. Solving ordinary differential equations ODE is the main target to accomplish. Previous work in this field was done but there have not been intensive efforts to optimize performance. The research aims on designing an application that can solve general differential equations using certain algorithms ODE solvers and developing the system in different languages in order to find the best solution that maximizes the application's performance. The design is an object oriented design OOD due to the possibility of future enhancements to the system. The application is developed in two different ways. One version of the application uses Java as the programming language. This version is fully implemented and tested. The other version which can be part of the future work uses Java front end, Java native interface JNI and C back end. Engineering Problem solver EPS is able to solve any differential equation using one of three algorithms that are built in to the system and plot the resulted solution as diagrams. During the development of the application performance is given great importance and is tested thoroughly. Certain changes are discussed to enhance this feature. The outcome of the research is a framework for mathematical applications, a useful system that solves ordinary differential equations and a performance study of the application.
