*On Optimization in Computer Aided Architectural Design* Antony D. Radford,John S. Gero,1980 This report examines the role of computers in the provision of information for architectural design decision making and compares the potential contributions of simulation generation and optimization techniques It argues that optimization models are particularly well suited to the provision of design information because they produce results which are prescriptive express design options and address the problems of the stability and sensitivity of solutions to change over time The difficulties posed by the multiple objectives which characterize architectural design problems are discussed and some solution approaches are described The report concludes that optimization concepts offer a powerful approach to design decision making and warrant much more research activity in the development of techniques and models for application in architecture

LAB.,United States. Office of Naval Research,1988 The complexity of engineering systems has increased to the extent that the interactive use of computers in their design has become more or less indispensable Current methods of heuristic design parameter adjustment via interactive computing are relatively ineffective The research covered by this report was aimed at developing a powerful general purpose optimization based computer aided engineering system design methodology The generality of our approach is made possible by the fact that a large variety of engineering design problems are transcribable into the form of a very small number of standard semi infinite optimization problems and because new system theoretic results facilitate the use of optimization in engineering design The reported research can be divided into three parts the first was concerned with the development of semi infinite optimization algorithms for engineering design the second one was devoted to the development of system theoretic results which facilitate the use of optimization in control system design and the third one was devoted to the development of an interactive software system which provides an appropriate environment

Joseph Edmund Higgins,1989 *The Best of ICCAD* Andreas Kuehlmann,2012-12-06 In 2002 the International Conference on Computer Aided Design ICCAD celebrates its 20th anniversary This book commemorates contributions made by ICCAD to the broad field of design automation during that time The foundation of ICCAD in 1982 coincided with the growth of Large Scale Integration The sharply increased functionality of board level circuits led to a major demand for more powerful Electronic Design Automation EDA tools At the same time LSI grew quickly and advanced circuit integration became widely available This in turn required new tools using sophisticated modeling analysis and optimization algorithms in order to manage the evermore complex design processes Not surprisingly during the same period a number of start up companies began to commercialize EDA solutions complementing various existing in house efforts The overall increased interest in Design Automation DA required a new forum for the emerging community of EDA professionals one which would be focused on the publication of high quality research results and provide a structure for the exchange of ideas on a broad scale Many of the original ICCAD volunteers were also members of CANDE Computer Aided Network Design a workshop of the IEEE Circuits and System Society In fact it was at a CANDE workshop that Bill McCalla suggested the creation of a conference for the EDA professional Bill later developed the name
