## **Organismic Evolution:**

*Organisms, Genes and Evolution* Dieter Stefan Peters, Michael Weingarten, 2000 Aus dem Inhalt Peter Janich Where does biology get its objects from Mathias Gutmann The status of organism Towards a constructivist theory of organism Walter Bock Explanations in a historical science Christine Hertler Organism and morphology Methodological differences between functional and constructional morphology Dominique G Homberger Similarities and differences The distinctive approaches of systematics and comparative anatomy towards homology and analogy Raphael Falk The organism as a necessary entity of evolution Franz M Wuketits The organism s place in evolution Darwin s views and contemporary organismic theories Christian Kummer The development of organismic structure and the philosophy behind Giuseppe Sermonti The butterfly and the lion Harald Riedl Organism Ecosystem Biosphere Some comments on the organismic concept Sievert Lorenzen How to advance from the theory of natural selection towards the General Theory of Self Organization Antonio Lima de Faria The evolutionary periodicity of flight Hans Rainer Duncker The evolution of avian ontogenies Determination of molecular evolution by integrated complex functional systems and ecological conditions Winfried Stefan Peters Bernd Herkner An outline of a theory of the constructional constraints governing early organismic evolution Werner E G Muller e a Monophyly of Metazoa Phylogenetic analyses of genes encoding SerThr kinases and a receptor Tyr kinase from Porifera sponges Karl Edlinger The evolution of the mollusc construction Living organisms as energy transforming systems Michael Gudo A structural functional approach to the soft bodies of rugose corals Franz Steiner 2000 *Organismic Theories of the State* F. W. Coker, 1910 Looks at two theories which attempt to comprehend the State under the general conception of organic life where the thesis is that the State is essentially like a natural organism in structure and members and in origin and development *Organismic Theories of the State* Francis William Coker, 1910 **Macroevolution in Human Prehistory** Anna Prentiss, Ian Kuijt, James C. Chatters, 2009-09-18 Cultural evolution much like general evolution works from the assumption that cultures are descendent from much earlier ancestors Human culture manifests itself in forms ranging from the small bands of hunters through intermediate scale complex hunter gatherers and farmers to the high density urban settlements and complex polities that characterize much of today s world The chapters in the volume examine the dynamic interaction between the micro and macro scales of cultural evolution developing a theoretical approach to the archaeological record that has been termed evolutionary processual archaeology The contributions in this volume integrate positive elements of both evolutionary and processualist schools of thought The approach as explicated by the contributors in this work offers novel insights into topics that include the emergence stasis collapse and extinction of cultural patterns and development of social inequalities Consequently these contributions form a stepping off point for a significant new range of cultural evolutionary studies *Reductionism and Systems Theory in the Life Sciences* Paul Hoyningen-Huene, Franz M. Wuketits, 2012-12-06 The present volume aims at giving a discussion of the problems of reductionism in contemporary life

sciences It contains six papers which deals with reduction reductionism in different fields of biological research Also the holistic perspective 1 e the systems view is discussed in some of the papers The message of this discussion Is that whereas reductionism is indeed an important strategy the systems approach is needed It is argued by some of the authors that organisms are complex systems and not just heaps of molecules 50 that the analytical method does not suffice Recent developments in systems theory offer the possibility to install a more comprehensive view of living systems what can be seen particularly in the field of evolutionary biology It is true that any organismic activity is molecular this is to say that it is based on molecular mechanisms But it is also true that the whole organism displays certain patterns of behavior which are not just molecular Any organism can be described as a system of different levels of organization different levels of order and complexity and it is important therefore to study all of the organizational levels and to see their peculiarities It should be obvious however that there is not one problem of reduction reductionism but that there are many problems linked together and that these problems appear at different levels of biological research and bio philosophical reflections **Divergence with Genetic Exchange** Michael Lynn Arnold,2016 This book is an investigation into processes associated with evolutionary divergence and diversification focussing on the role played by the exchange of genes between divergent lineages

Pre-organic Evolution and the Biblical Idea of God Charles Chapman,1891 Processes of Organic Evolution George Ledyard Stebbins,1971 **The Laws of Evolution and Derived Lawlike Principles** Sacha Haywood,2007 The Laws of Evolution questions our current understanding of the laws that govern our universe and its evolution **The Bible Or Organic Evolution** J. W. Duncan,1923 Early Organic Evolution Manfred Schidlowski,Stjepko Golubic,Michael M. Kimberley,David M. McKirdy,Philip A. Trudinger,2012-12-06 This volume is the final outcome of a conference designed to wrap up IOCP Project 157 Early Organic Evolution and Mineral and Energy Resources after a decade of prolific activity The picturesque solitude of Maria Laach Abbey in the Eifel Mountains FRO provided the appropriate setting for a conclave of some 80 specialists from the various walks of the field who during the week of Sept 19 23 1988 strived hard to define the state of the art in the principal segments of this Earth Science frontier The following pages contain the essence of the conference transactions giving a vivid cross section of the activities pursued by IOCP Project 157 during its final years The coverage of topics is not necessarily complete but rather eclectic in part With regard to single papers dealing with modern analogues of ancient processes the book title might even be considered a grave misnomer Nevertheless all contributions relate to the subject in the widest sense and the reader should be reminded that much of the heterogeneity reflected by the volume derives from the fact that it is primarily a research report from a highly interdisciplinary field rather than a textbook

**The Primary Factors of Organic Evolution** Edward Drinker Cope,1896 **Evolution Driven by Organismal Behavior** Rui Diogo,2017-03-08 This book proposes a new way to think about evolution The author carefully brings together evidence from diverse fields of science In the process he bridges the gaps between many different and usually seen as

conflicting ideas to present one integrative theory named ONCE which stands for Organic Nonoptimal Constrained Evolution. The author argues that evolution is mainly driven by the behavioral choices and persistence of organisms themselves in a process in which Darwinian natural selection is mainly a secondary but still crucial evolutionary player. Within ONCE evolution is therefore generally made of mistakes and mismatches and trial and error situations and is not a process where organisms engage in an incessant suffocating struggle in which they can't thrive if they are not optimally adapted to their habitats and the external environment. Therefore this unifying view incorporates a more comprehensive view of the diversity and complexity of life by stressing that organisms are not merely passive evolutionary players under the rule of external factors. This insightful and well reasoned argument is based on numerous fascinating case studies from a wide range of organisms including bacteria, plants, insects and diverse examples from the evolution of our own species. The book has an appeal to researchers, students, teachers and those with an interest in the history and philosophy of science as well as to the broader public as it brings life back into biology by emphasizing that organisms including humans are the key active players in evolution and thus in the future of life on this wonderful planet. *Organic Evolution Considered* Alfred Fairhurst, 1897    **Evolutionary Epistemology and its Implications for Humankind** Franz M. Wuketits, 1990-01-01. This book aims to outline the scientific biological foundations of evolutionary epistemology and to discuss its implications for humankind. Wuketits covers all aspects of evolutionary epistemology, including its empirical foundations and its philosophical and anthropological consequences, providing an accessible introduction with a minimum of jargon. *Evolutionary Theory* Robert G. B. Reid, 1985    **Evolutionary Epistemology** Werner Callebaut, Rik Pinxten, 1987    *The Meaning of Organic Evolution* Ralph Vary Chamberlin, 1911    *The Best Books: H. Natural science.
