**Newton, His Friends and His Foes** Alfred Rupert Hall, 1993 Over the last forty years Professor Hall has been a major contributor to the new view of Newton now generally accepted Essentially this has derived from the bringing to light and examination of Newton's vast but long neglected legacy of manuscripts and the first studies in this volume illustrate the wealth of information these provide on the earliest phases of his great discoveries in mathematics and science In particular they confirm the intensity and originality of Newton's investigations before and through the *anni mirabiles* of 1665-66 Further papers then deal with his relations with contemporaries such as Hooke Leibniz and Huyghens again making extensive use of unpublished manuscript material and with the developing influence of his work Durant les quarante dernières années le professeur Hall a été l'un des plus importants contributeurs la nouvelle appréciation de l'oeuvre de Newton qui est de nos jours la plus généralement acceptée Ceci provient essentiellement de l'examen du vaste héritage de manuscrits laissés par Newton et très longtemps négligés les premières études de ce volume illustrent la richesse d'informations contenues dans ceux-ci quant aux toutes premières phases de ses grandes découvertes dans le domaine des mathématiques et de la science Ils confirment en particulier l'intensité et l'originalité des recherches de Newton avant et pendant les *anni mirabiles* de 1665-66 S'ajoutent ceci plusieurs études où il est nouveau fait grand usage de manuscrits inédits traitant des rapports qu'il entretenait avec ses contemporains tels Hooke Leibniz et Huyghens ainsi que de l'influence progressive de ses travaux *Meanest Foundations and Nobler Superstructures* Ofer Gal, 2013-11-11 This book is a historical epistemological study of one of the most consequential breakthroughs in the history of celestial mechanics Robert Hooke's 1635-1703 proposal to compound the celestial motions of the planets of a direct motion by the tangent and an attractive motion towards a central body Newton The Correspondence li 297 Henceforth Correspondence This is the challenge Hooke presented to Isaac Newton 1642-1727 in a short but intense correspondence in the winter of 1679-80 which set Newton on course for his 1687 Principia transforming the very concept of the planetary heavens in the process Herivel 301 De Motu Version III 1 It is difficult to overstate the novelty of Hooke's Programme The celestial motions it suggested those proverbial symbols of stability and immutability wherein fact a process of continuous change a deflection of the planets from original rectilinear paths by a central attractive power Correspondence li 313 There was nothing necessary or essential in the shape of planetary orbits Already known to be not circular nor concentric *ibid* Hooke claimed that these apparently closed curves should be understood and calculated as mere effects of rectilinear motions and rectilinear attraction And as Newton was quick to realize this also implied that the planets neither move exactly in ellipse nor revolve twice in the same orbit so that there are as many orbits to a planet as it has revolutions Herivel 301 De Motu Version III *Renaissance Astrolabes and their Makers* Gerard L'E. Turner, 2024-10-28 This book is about the archaeology of science or what can be learnt from the systematic examination of the artefacts made by precision craftsmen for the study of the natural world An international authority on historical scientific

instruments Gerard Turner has collected here his essays on European astrolabes and related topics By 1600 the astrolabe had nearly ceased to be made and used in the West and before that date there was little of the source material for the study of instruments that exists for more modern times It is necessary to read the instruments themselves and astrolabes in particular are rich in all sorts of information mathematical astronomical metallurgical in addition to what they can reveal about craftsmanship the existence of workshops and economic and social conditions There is a strong forensic element in instrument research and Gerard Turner s achievements include the identification of three astrolabes made by Gerard Mercator all of whose instruments were thought to have been destroyed Other essays deal with the discovery of an important late 16th century Florentine workshop and of a group of mid 15th century German astrolabes linked to Regiomontanus

Science and Society A. Rupert Hall, 2024-10-28 This is the second selection of articles by Rupert Hall to be published by Variorum Whereas the first volume focused on Newton and his work the present one ranges more widely over the interactions between pure science applied science and craftsmanship but with an emphasis on the period from the 17th century to the Industrial Revolution The second and third sections look in particular at the relations between science and warfare and science and medicine and the position of the Royal Society forms the focus of several papers Throughout Professor Hall argues for the need to keep in mind that the distinction between the practical or professional and the intellectual was not then valid in the same way as now that the problems of the interaction and interdependence between knowing and doing are not invariant but rather historically determined and with defined historical contexts

Science, Politics and Universities in Europe, 1600-1800 John Gascoigne, 2024-10-28 This book seeks to illustrate the interconnections of science and philosophy with religion and politics in the early modern period by focusing on the institutional dynamics of the university Much of the work is devoted to one key university that of Cambridge and examines the major issues of the institutional setting of Newton s work the religious and political circumstances that favoured its dissemination and the way in which it was dealt with in the curriculum But the author also seeks to place the problem of the role of science in the early modern university in a larger European context To do so he includes a close prosopographical analysis of the scientific community from the mid 15th TO the end of the 18th century and discusses the complex relations between the universities and the Enlightenment

Magic, Memory and Natural Philosophy in the Sixteenth and Seventeenth Centuries Stephen Clucas, 2024-10-28 This collection of Stephen Clucas s articles addresses the complex interactions between religion natural philosophy and magic in sixteenth and seventeenth century Europe The essays on the Elizabethan mathematician and magus John Dee show that the angelic conversations of John Dee owed a significant debt to medieval magical traditions and how Dee s attempts to communicate with spirits were used to serve specific religious agendas in the mid seventeenth century The essays devoted to Giordano Bruno offer a reappraisal of the magical orientation of the Italian philosopher s mnemotechnical and Lullist writings of the 1580s and 90s and show his influence on early seventeenth century English understandings of

memory and intellection Next come three studies on the atomistic or corpuscularian natural philosophy of the Northumberland and Cavendish circles arguing that there was a distinct English corpuscularian tradition prior to the Gassendian influence in the 1640s and 50s Finally two essays on the seventeenth century Intelligencer Samuel Hartlib and his correspondents shows how religion alchemy and natural philosophy interacted during the Puritan Revolution

**Galen and Galenism** Luis García-Ballester, Jon Arrizabalaga, Montserrat Cabré, Lluís Cifuentes, 2024-10-28 Galenism a rational coherent medical system embracing all health and disease related matters was the dominant medical doctrine in the Latin West during the Middle Ages and the Renaissance Deriving from the medical and philosophical views of Galen 129 c 210 6 as well as from his clinical practice Latin Galenism had its origins in 12th century Salerno and was constructed from the cultural exchanges between the Arabic and Christian worlds It flourished all over Europe following the patterns of expansion of the university system during the subsequent centuries and was a major factor in shaping the healing systems of the Christian Jewish and Muslim communities the subject of a previous volume by Professor García Ballester The present collection deals with a wide array of issues regarding the historical Galen and late medieval and Renaissance Galenism but focuses in particular on the relationship between theory and practice It includes first English versions of two major studies originally published in Spanish

*Studies on the History of Papermaking in Britain* Alfred H. Shorter, 2024-08-07 The late A H Shorter is widely acknowledged for his pioneering work on the history of the British paper making industry and his books continue to provide the basis for further research The present volume brings together all his many articles hitherto scattered across a variety of specialist publications and often virtually inaccessible In these studies Dr Shorter tackled the subject with a broader scope than was possible in his books in particular they cover the period after 1800 tracing the changing geographical pattern of the industry They also contain a wealth of detailed information on papermaking across Britain notably in the counties of southwest England that is impossible to find elsewhere and is now made accessible through the comprehensive indexes to the volume Le regret A H Shorter est largement reconnu pour ses travaux originaux sur l'histoire de l'industrie papetière britannique et ses ouvrages continuent d'être la base de toutes recherches supplémentaires Le présent volume rassemble la totalité de ses nombreux articles jusqu'à présent dispersés sur tout un éventail de publications spécialisées et bien trop souvent inaccessibles Au travers de ces études l'auteur s'attaque au sujet sur un rayon plus large que cela n'avait été possible dans ses livres couvrant en particulier la période après 1800 et traitant la structure géographique de l'industrie Le recueil contient aussi abondance d'informations détaillées sur la fabrication du papier partout en Grande Bretagne notamment dans les comtés du sud ouest de l'Angleterre et qu'il est impossible de trouver ailleurs

**After Newton** Peter Michael Harman, 1993 In the period 1700 1850 there took place a major transition in natural philosophy from Newton's concept of passive matter activated by ethereal and active principles to the conception of nature as a self contained system its activity being seen in terms of energy and field principles which were internal to the natural order Without neglecting the scientific

context Dr Harman's approach is from the standpoint of the history of ideas The first part of the volume deals with the British tradition of speculation about the nature of matter ether and force the second with the Continent with the Leibnizian and Kantian critiques of Newtonian natural philosophy and the development of Helmholtz's principle of the conservation of energy The metaphysical and theological dimensions to matter theory are seen as fundamental to this profound shift in sensibilities they did not determine scientific practice but they constrained its form and shaped the structure of scientific thought Une transition importante dans le domaine de la philosophie naturelle a pris place entre 1700 et 1850 passant du concept de Newton selon lequel la mati re inerte etait activ e par des principes actifs et sublimes celui de la nature en tant que syst me se suffisant lui m ame son activit tant consid r e en termes d nergie et de principes pratiques qui appartenaient l ordre naturel Sans pour autant n glier le contexte scientifique l approche du Dr Harman prend l histoire des id es pour point de d part La premi re partie du volume traite de la tradition sp culative britannique quant la nature de la mati re ther et force la seconde traite du Continent avec la critique leibnitzienne et kantienne de la philosophie newtonienne et le d veloppement du principe de conservation d nergie de Helmholtz Les dimensions th ologiques et m taphysiques de la th orie de la mati re sont consid r es comme tant fondamentales ce changeme *Archives Internationales D'histoire Des Sciences* ,1997

*Perspectives on Science* ,1995 **Newton, his Friends and his Foes** A. Rupert Hall,2024-10-28 Over the last forty years Professor Hall has been a major contributor to the new view of Newton now generally accepted Essentially this has derived from the bringing to light and examination of Newton's vast but long neglected legacy of manuscripts and the first studies in this volume illustrate the wealth of information these provide on the earliest phases of his great discoveries in mathematics and science In particular they confirm the intensity and originality of Newton's investigations before and through the anni mirabiles of 1665-66 Further papers then deal with his relations with contemporaries such as Hooke Leibniz and Huyghens again making extensive use of unpublished manuscript material and with the developing influence of his work Durant les quarante derni res ann es le professeur Hall a t l un des plus importants contributeurs la nouvelle appr ciation de l oeuvre de Newton qui est de nos jours la plus g n ralement accept e Ceci provient essentiellement de l examen du vaste h ritage de manuscrits laiss s par Newton et tr s longtemps n glig les premi res tudes de ce volume illustrent la richesse d informations contenues dans ceux ci quant aux toutes premi res phases de ses grandes d couvertes dans le domaine des math matiques et de la science Ils confirment en particulier l intensit et l originalit des recherches de Newton avant et pendant les anni mirabiles de 1665-66 S ajoutent ceci plusieurs tudes o il est nouveau fait grand usage de manuscrits in dits traitant des rapports qu il entretenait avec ses contemporains tels Hooke Leibniz et Huyghens ainsi que de l influence progressive de ses travaux **Chemists and Chemistry in Nature and Society, 1770-1878** Trevor Harvey Levere,1994 Explores the chemical revolution in 18th century Europe and Britain and its influences on the 19th century This volume recalls how Coleridge incorporated chemistry into a philosophy of nature how Faraday extended Davy's work and how even Hegel's

philosophy of geology was based on chemistry      **Studies in the Culture of Science in France and Britain Since the Enlightenment** Maurice P. Crosland, 1995 A wide range of the author's previously published papers in the history of science is brought together in this book. The articles which are mainly concerned with the 18th and 19th centuries are arranged in three sections: science in the Enlightenment period; science in an institutional context; national and international science. Some of the papers present a broad perspective; others are of a more detailed nature, drawing on the archives of the Paris Academy of Sciences and the Royal Society of London. An original interpretation of the career of Priestley is followed by a historiographical article on Lavoisier. Papers with a more social approach include subjects such as the professionalisation of science, peer review and science and war. It is argued that science became a profession in France long before it did in Britain. France also created an important precedent in the academic world in demanding publications of research as credentials.

**Islamic Astronomy and Medieval Spain** Julio Samsó, 1994 This volume focuses on the development of astronomy in al Andalus (Islamic Spain), relating it to the astronomical science of the Latin West. Both Islamic and European science survived the Latin astronomical tradition after the Arab conquest of 711, and then the influence of Arabic science in Christian Spain.

Producing Knowledge Ofer Gal, 1996      **Arches, Vaults, and Buttresses** Jacques Heyman, 1996      *Isis Cumulative Bibliography 1986-1995: Persons: M-Z. Institutions* John Neu, 1997      **Science for All** William Hodson Brock, 1996 19 studies in English, four published for the first time here, show how problematic it is to try to make science available to all. Covering the history of Victorian science and education, these studies shed light on science education and culture in modern Britain. *The British National Bibliography* Arthur James Wells, 1993
