RJ Shavelson

Nexafs Spectroscopy:

NEXAFS Spectroscopy Joachim Stöhr, 1992-08-06 Develops all concepts of the fundamental principles and applications of NEXAFS spectroscopy presenting a unified picture of the latest theoretical and experimental results. The power of this technique is demonstrated in particular in the application to low Z molecules bonded to surfaces systems of special interest in surface chemistry where NEXAFS reveals the electronic and structural properties of the molecules and details state of the art instrumentation in analysis techniques and results along with tabulated information about the various molecular adsorption systems that have already been studied by NEXAFS

Chemical Applications of Synchrotron Radiation

Tsun-Kong Sham, 2002 The synchrotron light source is becoming widely available after its evolution from its infancy in the sixties to the present third generation source with insertion devices. It is timely to examine the impact that synchrotron light has made and will continue to make on chemical research. With this objective in mind the editor of this invaluable book invited contributions from practitioners who are in the forefront of the research. The book summarizes most of the significant developments in the last decade in chemical and related research using synchrotron light. The utilization of the light as a probe as well as an energy source is emphasized. This book is organized into two parts in order of increasing photon energy. Part I deals with the applications of low energy photons and covers areas such as gas phase photodissociation reactions and dynamics, soft X ray fluorescence, IR and photoemission analysis of surfaces, spectroscopy of organic and polymeric materials, catalysts, electronic and magnetic materials and spectromicroscopy. Part II encompasses applications using soft to hard X rays including spectroscopy of surface and thin films, XAFS, diffraction and scattering and several technological applications namely the microprobe photoetching and tribology
