## Leveraging

Pentaho+, Tapestry and Duality

For government agencies, effective investigative case management requires a flexible, scalable, and secure platform with advanced data analytics to detect, prevent, and investigate activities that threaten program integrity. Our solution streamlines the investigative process by automating the input and analysis of diverse data sources, including financial transactions, procurement records, digital evidence, and open-source information.

By identifying patterns, anomalies, and trends, our tools monitor and flag suspicious activities related to criminal activity. This allows agencies to better leverage human capital, focus on leads with the highest potential, and increase efficiency while pursuing tactical and strategic goals.

With automated data ingestion, analysis and notifications, our solution reduces time spent on data organization, enabling investigators to concentrate on critical tasks and building stronger cases. To learn more about how our solution can elevate your agency's investigative capabilities, contact us today for a personalized consultation.

## **Next Generation Case Tools:**

**Next Generation CASE Tools** Kalle Lyytinen,V.-P. Tahvanainen,1992 CASE tools have rapidly gained popularity both as a research topic and in practical information systems work This collection of articles from some of the foremost researchers in the field provides an overview of what is currently happening in CASE research and what CASE environments of the future may look like    Software Engineering: Principles and Practices, 2nd Edition Khurana Rohit,2010 This revised edition of Software Engineering Principles and Practices has become more comprehensive with the inclusion of several topics The book now offers a complete understanding of software engineering as an engineering discipline Like its previous edition it provides an in depth coverage of fundamental principles methods and applications of software engineering In addition it covers some advanced approaches including Computer aided Software Engineering CASE Component based Software Engineering CBSE Clean room Software Engineering CSE and formal methods Taking into account the needs of both students and practitioners the book presents a pragmatic picture of the software engineering methods and tools A thorough study of the software industry shows that there exists a substantial difference between classroom study and the practical industrial application Therefore earnest efforts have been made in this book to bridge the gap between theory and practical applications The subject matter is well supported by examples and case studies representing the situations that one actually faces during the software development process The book meets the requirements of students enrolled in various courses both at the undergraduate and postgraduate levels such as BCA BE BTech BIT BIS BSc PGDCA MCA MIT MIS MSc various DOEACC levels and so on It will also be suitable for those software engineers who abide by scientific principles and wish to expand their knowledge With the increasing demand of software the software engineering discipline has become important in education and industry This thoughtfully organized second edition of the book provides its readers a profound knowledge of software engineering concepts and principles in a simple interesting and illustrative manner    **Advanced Information Systems Engineering** Bo Steinholtz,Lars Bergman,Arne Sølvberg,1990-04-25 The Nordic Conference on Advanced

Information Systems Engineering CAiSE is an annual international conference for users developers and researchers of information systems technology and methodology A distinctive characteristic of the CAiSE conference series is the objective to appeal to advanced practitioners as well as to researchers and to promote communication between the two groups In this second CAiSE conference the program was divided into two types of sessions that were not run in parallel Technical Paper sessions with formally reviewed technical papers and Practice and Experience sessions with invited speakers and panel discussions The proceedings include the formally reviewed technical papers and abstracts of the invited presentations The technical papers present important international mainly European work in Information Systems Engineering within such areas as conceptual modelling prototyping requirements engineering design support software process modelling tool design and tool experiences The abstracts of invited speakers presentations give an indication of current best industrial practice

**Facilitating Technology Transfer through Partnership** Tom McMaster, E. Mumford, E.B. Swanson, B. Warboys, David Wastell, 2016-01-09 The primary aim for this book is to gather and collate articles which represent the best and latest thinking in the domain of technology transfer from research academia and practice around the world. We envisage that the book will as a result of this represent an important source of knowledge in this domain to students, undergraduate and postgraduate researchers, practitioners and consultants chiefly in the software engineering and IT industries but also in management and other organisational and social disciplines. An important aspect of the book is the role that reflective practitioners and not just academics play. They will be involved in the production and evaluation of contributions as well as in the design and delivery of conference events upon which of course the book will be based **Information System**

**Concepts** Eckhard D. Falkenberg, Wolfgang Hesse, Antoni Olive, 2016-02-02 This is a compilation of papers presented at the Information System Concepts conference in Marburg, Germany. The special focus is consolidation and harmonisation of the numerous and widely diverging views in the field of information systems. This issue has become a hot topic as many leading information system researchers and practitioners come to realise the importance of better communication among the members of the information systems community and of a better scientific foundation of this rapidly evolving field **The French School of Programming** Bertrand Meyer, 2024-04-29 The French School of Programming is a collection of insightful discussions of programming and software engineering topics by some of the most prestigious names of French computer science. The authors include several of the originators of such widely acclaimed inventions as abstract interpretation, the Caml, OCaml and Eiffel programming languages, the Coq proof assistant, agents and modern testing techniques. The book is divided into four parts: Software Engineering, A Programming Language, Mechanisms and Type Systems, B Theory, C and Language Design, and Programming Methodology. They are preceded by a Foreword by Bertrand Meyer, the editor of the volume, a Preface by Jim Woodcock, providing an outsider's appraisal of the French school's contribution, and an overview chapter by Gérard Berry, recalling his own intellectual journey. Chapter 2 by Marie Claude Gaudel presents a 30 year perspective on the evolution of testing, starting with her own seminal work. In chapter 3 Michel Raynal covers distributed computing with an emphasis on simplicity. Chapter 4 by Jean Marc Jézquel, former director of IRISA, presents the evolution of modeling from CASE tools to SLE and Machine Learning. Chapter 5 by Joëlle Coutaz is a comprehensive review of the evolution of Human Computer Interaction. In part B, chapter 6 by Jean Pierre Briot describes the sequence of abstractions that led to the concept of agent. Chapter 7 by Pierre Louis Curien is a personal account of a journey through fundamental concepts of semantics, syntax and types. In chapter 8 Thierry Coquand presents some remarks on dependent type theory. Part C begins with Patrick Cousot's personal historical perspective on his well known creation, abstract interpretation. In chapter 9 Chapter 10 by Jean Jacques Lévy is devoted to tracking redexes in the Lambda Calculus. The final chapter of that part, chapter 11 by Jean Pierre Jouannaud, presents advances in rewriting systems, specifically the confluence of terminating rewriting.

computations Part D contains two longer contributions Chapter 12 is a review by Giuseppe Castagna of a broad range of programming topics relying on union intersection and negation types In the final chapter Bertrand Meyer covers ten choices in language design for object oriented programming distinguishing between right and wrong resolutions of these issues and explaining the rationale behind Eiffel's decisions This book will be of special interest to anyone with an interest in modern views of programming on such topics as programming language design the relationship between programming and type theory object oriented principles distributed systems testing techniques rewriting systems human computer interaction software verification and in the insights of a brilliant group of innovators in the field **Data Processing Digest**, 1988

**Software Engineering and Testing** B. B. Agarwal, S. P. Tayal, Mahesh Gupta, 2010 This book is designed for use as an introductory software engineering course or as a reference for programmers Up to date text uses both theory applications to design reliable error free software Includes a companion CD ROM with source code third party software engineering applications **Proceedings of the Sixth International Workshop on Computer-Aided Software Engineering, CASE '93, Singapore, July 19-23** Hing-Yan Lee, Thomas F. Reid, Stan Jarzabek, 1993 **OOIS'98** Colette Rolland, Georges Grosz, 1998-09-16 This book contains the papers presented at the 5th International Conference on Object Oriented Information Systems OOIS 98 which is to be held at the University de La Sorbonne Paris France 9-11 September 1998 The papers published in this volume outline recent research in object oriented concepts and principles object oriented methods and tools as well as reports on industrial projects from both researchers and practitioners in the field The conference especially highlighted areas of significant interest to industry which provide innovative directions for the development of next generation systems such as coping with legacy systems transition to object technology lessons learned from large scale projects using objects object relational design **CASE '90** Ronald J. Norman, Roger Van Ghent, 1990 **CASE** Alan S. Fisher, 1991-08-20 Totally updated and revised this new edition now covers the complete software development cycle not just the design phase Filled with practical examples it shows how to fully exploit CASE tools when managing large and complex software projects **Towards a Comprehensive MetaCASE and CAME Environment** Steven Kelly, 1997 Yhteenveto

**Advance Working Papers**, 1988 **Customisable Process Modelling Support and Tools for Design Environment** Pentti Marttiin, 1998 Yhteenveto **Software Prototyping** Mike F. Smith, 1991 The cost of producing software worldwide now approaches 250 billion annually much of it delivered late and over budget This book offers a better way prototyping The author suggests incorporating the input of end users early on radically changing the software process itself Controversial and highly readable **Advanced Information Systems Engineering**, 1997 **Intelligent Software Systems Development** Paul Harmon, Curtis Hall, 1993-09-15 Focusing on a wide variety of technologies this book shows readers how to identify choose and integrate state of the art software for customized business applications offers real world examples and case studies of successfully integrated systems from Fortune 500 companies and includes special quick access
