Missile Systems:

History of Strategic Air and Ballistic Missile Defense, 2009 From the book's Foreword In the early 1970s the U S Army Center of Military History contracted with BDM Corporation for a history of U S efforts to counter Soviet air and missile threats during the Cold War The resulting two volume History of Strategic Air and Ballistic Missile Defense covers the years 1945 1972 when the strategic arms competition between the United States and the Soviet Union was at its height The study was first published for limited distribution in 1975 and recently declassified with minimal redaction These volumes address the passive and active defense strategies technologies and techniques adopted by both U S and Soviet defense planners Much of their actions centered around three common questions How might we be attacked How shall we defend our country What can technology do to solve the basic problems of defending against this new intercontinental threat The Missile Defense Systems of George W. Bush Richard Dean Burns, 2010-09-02 This volume reviews the debates surrounding the anti ballistic missile ABM defense systems and their deployment by George W Bush allowing readers to assess for themselves the significance of Bush's decisions The Missile Defense Systems of George W Bush A Critical Assessment asks and answers a number of pressing questions about Bush's decision to deploy ground based missiles Has the system become reliable If not what are the prospects for it to become effective What have the fiscal costs been What was the political impact of efforts to expand ABM systems to Europe This is the only major book that brings together all of the factors historical and current to allow readers to assess President Bush's decisions for themselves Opening with an extensive history of missile defense the book analyzes Bush's efforts to establish ground based missiles in Eastern Europe as well as the impact of his decisions Both the administration's policies and evaluations and those of critical observers are presented President Obama's program for missile defense is reviewed as well A final chapter evaluates the technical progress of the various ABM systems and weighs the political dimensions of the deployment decision and the cost of the undertaking to date *US Strategic and Defensive Missile Systems 1950-2004* Mark Berhow, 2012-09-20 For 40 years following the end of World War II the Western democratic governments and the Eastern Bloc Communist powers were locked in the ideological political and economic struggle of the Cold War The United States and the Soviet Union developed missile systems capable of delivering conventional and nuclear explosives against enemy massed bomber formations in the air and of delivering retaliatory nuclear payloads against ground targets located on distant continents The missile systems played both a defensive role and a potential offensive role which was parlayed to the public as deterrence against attack by the rival bloc This illustrated guide provides a detailed overview of the fixed launch site strategic missile systems of the United States Ballistic Missile Defense In The Post-cold War Era David B H Denoon, 2021-11-28 With the end of the Cold War and the visibility of U S Patriot missile defenses during the 1991 Gulf War the cost and benefits of ballistic missile defense systems BMD need to be re evaluated In this detailed and balanced study David Denoon assesses new types of short range and intercontinental missile defenses In the post Cold War era two

fundamental changes have made missile defense for the United States and its military forces more compelling. The United States and Russia no longer see each other as direct threats and there has been a dramatic proliferation of ballistic missile capability in the Third World. Consequently, U.S. forces deployed overseas are more likely to be at risk and eventually the United States itself could become vulnerable to missile threats. With these changes in mind, David Denoon analyzes the current BMD dilemma, arguing that active defenses against missiles should be seen as a form of insurance against catastrophe. He assesses the likelihood of missile attacks and the appropriate level of investment for the United States to defend against such attacks. The book provides an assessment of deterrence and the performance of the Patriot missiles during the 1991 Gulf War, critiques the Strategic Defense Initiative, and analyzes the prospects for new types of short range and intercontinental missile defenses.

Defending America James M. Lindsay, Michael E. O'Hanlon, 2004-05-13 Arms control and missile defense are once again at the forefront of the American national security agenda. Not surprisingly, the debate has broken down along well-worn lines. Arms control advocates dismiss the idea of missile defense as a dangerous and costly folly. Missile defense advocates argue that the U.S. should move aggressively to defend itself against missile attack. With clear and lively prose, free of partisan rhetoric, *Defending America* provides reliable factual analysis of the missile defense debate. Written for a general audience, it assesses the current and likely future missile threat to the United States, examines relevant technologies, and suggests how America's friends and foes would react to a decision to build a national missile defense. Lindsay and O'Hanlon reject calls for large-scale systems as well as proposals to do nothing, instead arguing for a limited national missile defense.

Long-Range Ballistic Missile Defense in Europe Steven A. Hildreth, 2007 Successive U.S. administrations have urged the creation of an anti-missile system to protect against threats from rogue states. The Bush Administration believes that North Korea and Iran are strategic threats and questions whether they can be deterred by conventional means. The Administration has built long-range missile defense bases in Alaska and California to protect against North Korean missiles. The system has been tested with mixed results and questions have been raised about its effectiveness. The Administration has proposed deploying a ground-based mid-course defense (GMD) element of the larger Ballistic Missile Defense System (BMDS) in Europe to defend against the threat of long-range missiles from Iran. The system would include 10 interceptors in Poland, a fixed radar installation in the Czech Republic, and another forward-deployed radar elsewhere in the region but closer to Iran. Deployment of the European GMD capability is scheduled to be completed by 2013 at a cost of 4.04 billion.

Complex Air Defense Tom Karako, Masao Dahlgren, 2022-05-01 In the past five years, Russia, China, and others have accelerated their development of hypersonic missiles to threaten U.S. forces in the homeland and abroad. The current Ballistic Missile Defense System, largely equipped to contend with legacy ballistic missile threats, must be adapted to this challenge. The same characteristics that make hypersonic missiles attractive may also hold the key to defeating them. This CSIS report argues how a new hypersonic defense architecture should exploit hypersonic weapons' unique vulnerabilities and

employ new capabilities such as a space sensor layer to secure critical nodes These changes are not only necessary to mitigate the hypersonic threat but to defeat an emerging generation of maneuvering missiles and aerial threats *Cruise Missile Defense* United States. General Accounting Office,1999 **Making Sense of Ballistic Missile Defense** National Research Council,Division on Engineering and Physical Sciences,Committee on an Assessment of Concepts and Systems for U.S. Boost-Phase Missile Defense in Comparison to Other Alternatives,2013-01-28 The Committee on an Assessment of Concepts and Systems for U S Boost Phase Missile Defense in Comparison to Other Alternatives set forth to provide an assessment of the feasibility practicality and affordability of U S boost phase missile defense compared with that of the U S non boost missile defense when countering short medium and intermediate range ballistic missile threats from rogue states to deployed forces of the United States and its allies and defending the territory of the United States against limited ballistic missile attack To provide a context for this analysis of present and proposed U S boost phase and non boost missile defense concepts and systems the committee considered the following to be the missions for ballistic missile defense BMD protecting of the U S homeland against nuclear weapons and other weapons of mass destruction WMD or conventional ballistic missile attacks protection of U S forces including military bases logistics command and control facilities and deployed forces including military bases logistics and command and control facilities They also considered deployed forces themselves in theaters of operation against ballistic missile attacks armed with WMD or conventional munitions and protection of U S allies partners and host nations against ballistic missile delivered WMD and conventional weapons Consistent with U S policy and the congressional tasking the committee conducted its analysis on the basis that it is not a mission of U S BMD systems to defend against large scale deliberate nuclear attacks by Russia or China Making Sense of Ballistic Missile Defense An Assessment of Concepts and Systems for U S Boost Phase Missile Defense in Comparison to Other Alternatives suggests that great care should be taken by the U S in ensuring that negotiations on space agreements not adversely impact missile defense effectiveness This report also explains in further detail the findings of the committee makes recommendations and sets guidelines for the future of ballistic missile defense research Cruise missile defense : progress made but significant challenges remain : report to the chairman, Subcommittee on Military Research and Development, Committee on Armed Services, House of Representatives , The HAWK Air Defense Missile System Marc Romanych,Jacqueline Scott,2022-08-18 The first history of the US Army s HAWK missile system the world s first mobile air defense missile system which saw service and combat around the world **National Missile Defense** Erin V. Causewell,2002 Missiles came of age after World War II and the United States has pursued missile defences ever since The issue has turned out to be one of the most divisive of the past generation taking into account the Russian position and their threat or perceived threat and the technical difficulties of actually implementing any missile defence The Bush Administration claims that for the first time an effective missile defence is technically possible and that the threat of weapons of mass destruction has spread to many nations and groups other than

Russia The two factors according to them make missile defence an urgent priority justifying the breaking of the widely revered ABM Treaties Their argument rests partially on a bet that the Russians have now fallen so far behind since the Yeltsin government took over that they cannot keep up technologically Although terrorism groups will not be deterred by the missile defence being planned countries like China North Korea etc might well be This book frames the current debate and also presents the legal considerations for withdrawal from the ABM Treaties **Missile Defense** Steven A. Hildreth, 2004

The United States has pursued missile defenses since the dawn of the missile age shortly after World War II The development and deployment of missile defenses has not only been elusive but has proven to be one of the most divisive issues of the past generation The Bush Administration substantially altered the debate over missile defenses The Administration requested significant funding increases for missile defense programs eliminated the distinction between national and theater missile defense restructured the missile defense program to focus more directly on developing deployment options for a layered capability to intercept missiles aimed at U S territory across the whole spectrum of their flight path adopted a new untried development and acquisition strategy announced U S withdrawal from the 1972 Anti ballistic Missile Treaty and is deploying an initial national missile defense capability Critics however take issue with assertions that the threat is increasing citing evidence that the number of nations seeking or possessing nuclear weapons has actually declined over the past twenty years Moreover they argue that the technology for effective missile defense remains immature that deployment is provocative to allies friends and adversaries and it is a budget buster that reduces the availability of funds to modernize and operate U S conventional military forces They argue especially that some major powers view U S missile defense as an attempt at strategic domination and that other such as China will expand their missile capabilities in response **History of Strategic Air and Ballistic Missile Defense: 1945-1955**, 2009 From the book's Foreword In the early 1970s the U S Army Center of Military History contracted with BDM Corporation for a history of U S efforts to counter Soviet air and missile threats during the Cold War The resulting two volume History of Strategic Air and Ballistic Missile Defense covers the years 1945 1972 when the strategic arms competition between the United States and the Soviet Union was at its height The study was first published for limited distribution in 1975 and recently declassified with minimal redaction These volumes address the passive and active defense strategies technologies and techniques adopted by both U S and Soviet defense planners Much of their actions centered around three common questions How might we be attacked How shall we defend our country What can technology do to solve the basic problems of defending against this new intercontinental threat **Sea-Based Ballistic Missile Defense** Ronald O'Rourke, 2011-02 As part of its effort to develop an integrated global ballistic missile defense BMD system the DoD is modifying several Navy Aegis cruisers and many Navy Aegis destroyers for BMD operations On Sept 17 2009 the Obama Admin announced that it wants to set aside the Bush Admin's proposed European BMD architecture and instead pursue a different European BMD architecture that would involve a significant use of land and sea based SM 3

interceptors and the Aegis BMD system The issue for Congress in this report is What should be the role of sea based systems in U S BMD and are DoD s programs for sea based BMD capabilities appropriately structured and funded Tables A print on demand edition of a hard to find publication *Seize the High Ground* James A. Ballistic Missile Defense Technologies , 1985 *Ballistic Missile Defense* Ashton B. Carter, David N. Schwartz, 2010-12-01 Defense against nuclear attack so natural and seemingly so compelling a goal has provoked debate for at least twenty years Ballistic missile defense systems formerly called antiballistic missile systems offer the prospect of remedying both superpowers alarming vulnerability to nuclear weapons by technological rather than political means But whether ballistic missile defenses can be made to work and whether it is wise to build them remain controversial The U S Soviet Anti Ballistic Missile Treaty of 1972 restricts testing and deployment of ballistic missile defenses but has not prohibited more than a decade of research and development on both sides As exotic new proposals are put forward for space based directed energy systems questions about the effectiveness and wisdom of missile defense have again become central to the national debate on defense policy This study jointly sponsored by the Brookings Institution and the Massachusetts Institute of Technology examines the strategic technological and political issues raised by ballistic missile defense Eight contributors take an analytical approach to their areas of expertise which include the relationship of missile defense to nuclear strategy the nature and potential applications of current and future technologies the views on missile defense in the Soviet Union and among the smaller nuclear powers the meaning of the Anti Ballistic Missile Treaty for today s technology and the present role and historical legacy of ballistic missile defense in the context of East West relations The volume editors give a comprehensive introduction to this wide range of subjects and an assessment of future prospects In the final chapter nine knowledgeable observers offer their varied personal views on the ballistic missile defense question **The Illustrated Encyclopedia of the World's Rockets & Missiles** Bill Gunston, 1979
