Communications,1995 **Micro-mobility Enhancement in Multicast Mobile IPv6 Wireless Networks** Chu Eu Yong,2006 Mobile Internet Protocol version 6 MIPv6 has been proposed to solve the problem of mobility in the new are of Internet Mobile IPv6 allows mobile devices always addressable by its home address wherever it is locaed Previous research has shown that MIPv6 only defined a means of managing global mobility macro mobility but does not address local mobility micro mobility separately Instead it uses the same mechanism in both cases This involves long handover delay and a lot of signaling In this thesis focus is given on a micro mobility based test bed evaluation experiment with improved handover scheme This proposed handover scheme is the enhancement of the existing Mobile IPv6 protocol it intergrates hierarchical concept and multicast function Hierarchical design was used to totally shield the micro mobility from macro mobility in order to reduce location update signal and signaling traffic within micro level network while multicasting is used to send packets to Mobile Node MN through base stations near to MN This will reduce handover delay that causes packet lost when MN is roaming The test bed is comprised of hardware and software and network analyzer tool to monitor the handover operation The hardware consists of 5 personal computers to perform the job of one Multicast Router MR 2 Access Points AP one Home Agent HA and one Correspondent Node CN A notebook is used as the Mobile Node MN This test bed is used to analyze the Mobile IPv6 handover delay packet delay and packet loss in real wireless enviroment Since results were gathered from real enviroment so wired and wireless media delay were taken into account in our performance evaluation entities Prior to the test bed performance measurement time synchronization of CN packet generator and MN packet receiver is done with Network Time Protocol NTP to ensure the accuracy of the collected data Two scenarios were measured which are Mobile

IPv6 handover and Enhanced Mobile IPv6 with multicast function and hierarchical design respectively. Finally it was shown that the proposed handover scheme reduces the handover delay, packet delay, packet lost and increases the throughput and overall throughput during handover. This gives advantages of zero packet lost and lower handover delay which can significantly improve micro mobility performance on 3rd and 4th Generation mobile telephony and beyond. **Proceedings of the ... Supporting Schemes over IPv6 Networks Riaz Khan, 2017-09-22. Master's Thesis from the year 2012 in the subject Communications Multimedia Internet New Technologies grade 9.0 language English abstract. The study provides quantitative results of the performance improvements obtained by new enhancements as observed by a single mobile user with respect to handoff latency, throughput, packet delivery ratio, average jitter, etc. In addition to this, the signaling load costs associated with the performance improvements provided by the enhancements has been analyzed. The handover delay reduction approaches specifically the Fast Handover Mobile Ipv6 FHMIPv6 have been shown. The thesis concludes with the analysis of simulation results evaluating the MIPv6 HMIPv6 and FHMIPv6 performance and finally gives some suggestions for the future work. Mobile Internet Protocol MIP the current International Engineering Task Force IETF proposal for IP mobility support represents a key element for future all Internet Protocol IP wireless networks to provide service continuity while on the move within a multi access environment. A performance evaluation of Mobile internet protocol version 6 IPv6 and its proposed enhancements that is Fast Handovers for Mobile IPv6 Hierarchical Mobile IPv6 was conducted. And a combination of fast handover FMIPv6 and hierarchical mobile IPv6 HMIPv6 was proposed and simulated by using the network simulator NS 2. The simulation scenario comprised two access routers and one mobile node that communicated in accordance with the IEEE 802.11 wireless LAN standards. *Management of Multimedia Networks and Services*, 2004. **IEEE International Conference on Personal Wireless Communications**, 2000. **Providing Quality of Service in Heterogeneous Environments** Joachim Charzinsky, Ralf Lehnert, Phuoc Tran-Gia, 2003
