Video Modelling and Behaviour Analysis Mickey Keenan, Christos Nikopoulos, 2006-06-15 Applied Behaviour Analysis ABA is a successful educational method for developing social and communication skills in children with autism. The use of video modelling in ABA programmes has demonstrated great effectiveness in teaching behavioural skills to autistic children and this book explains how and why. Video modelling is an easy to use behaviour modification technique that uses videotaped rather than live scenarios for the child to observe, concentrating the focus of attention for the child with autism and creating a highly effective stimulus for learning. Video Modelling and Behaviour Analysis provides a practical introduction to the technique, its objectives, strategies for use and evidence of its success. Illustrative case examples are supported by detailed diagrams and photographs with clear, accessible explanations. Video Modelling and Behaviour Analysis will be a welcome addition to the practical literature on autism interventions for parents of autistic children and the professionals working with them.

Three Domain Modelling and Uncertainty Analysis Atom Mirakyan, Roland De Guio, 2015-05-28 This book examines in detail the planning and modelling of local infrastructure like energy systems including the complexities resulting from various uncertainties. Readers will discover the individual steps involved in infrastructure planning in cities and territories as well as the primary requirements and supporting quality factors. Further topics covered concern the field of uncertainty and its synergies with infrastructure planning. Theories, methodological backgrounds and concrete case studies will not only help readers to understand the proposed methodologies for modelling and uncertainty analysis but will also show them how these approaches are implemented in practice.

Modelling High-level Cognitive Processes Richard P. Cooper With Contributi, Peter G. Yule, John Fox, David W. Glasspool, Richard P. Cooper, 2013-05-13 This book is a practical guide to building computational models of high level cognitive processes and systems. High level processes are those central cognitive processes involved in thinking, reasoning, planning and so on. These processes appear to share representational and processing requirements and it is for this reason that they are considered together in this text. The book is divided into three parts. Part I considers foundational and background issues. Part II provides a series of case studies spanning a range of cognitive domains. Part III reflects upon issues raised by the case studies. Teachers of cognitive modeling may use material from Part I to structure lectures and practical sessions with chapters in Part II forming the basis of in depth student projects. All models discussed in this book are developed within the COGENT environments. COGENT provides a graphical interface in which models may be sketched as box and arrow diagrams and is both a useful teaching tool and a productive research tool.

As such this book is designed to be of use to both students of cognitive modeling and active researchers. For students the book provides essential background material plus an extensive set of example models, exercises and project material. Researchers of both symbolic and connectionist persuasions will find the book of interest for its approach to cognitive modeling which emphasizes methodological issues. They will also find that the COGENT environment itself has much to offer.

Model Behavior Jay McInerney, 2000-03-14 A Great Gatsby for the end of the century. The Baltimore Sun Jay McInerney's first novel Bright Lights Big City helped bring about a revolution in contemporary fiction in trade paperback. But more importantly its publication brought us a major writer of great literary talent and incisive perception. In his latest novel Model Behavior McInerney offers us the portrait of a doubting devotee of the city where vocation, career and ambition which only occasionally coincide run head on with friendship and love or merely desire. We see Conor McKnight's well-earned ennui, fast becoming anxiety as he tries to protect himself from the harrowing fate that unfolds before his bleary eyes. McInerney is at the peak of his craft in what is sure to become a classic at the end of the century. This edition contains only the novel Model Behavior and not the additional seven stories which were published in the original hardcover.

Model Behavior Jay McInerney, 1998 *Simulation Modelling* Andrew Greasley, 2022-09-21 While simulation has a vast area of application this textbook focuses on the use of simulation to analyse business processes. It provides an up to date coverage of all stages of the discrete event simulation (DES) process, covering important areas such as conceptual modelling, modelling input data, verification and validation, and simulation output analysis. The book is comprehensive yet uncomplicated, covering the theoretical aspects of the subject and the practical elements of a typical simulation project, demonstrated by cases, examples and exercises. It also shows how simulation relates to new developments in machine learning, big data analytics and conceptual modelling techniques. Guidance is provided on how to build DES models using the Arena, Simio and Simul8 simulation software and tutorials for using the software are incorporated throughout. *Simulation Modelling* offers a uniquely practical and end to end overview of the subject which makes it perfect required or recommended reading for advanced undergraduate and postgraduate students studying business simulation and simulation modelling as part of operations research, business analytics, supply chain management and computer science courses.

Advances in Mathematical Modelling of Composite Materials Konstantin Z. Markov, 1994 This volume contains papers of leading experts in the modern continuum theory of composite materials. The papers expose in detail the newest ideas, approaches, results and perspectives in this broadly interdisciplinary field, ranging from pure and applied mathematics, mechanics, physics and materials science.
