

Low-Dose Radiation Therapy for Osteoarthritis

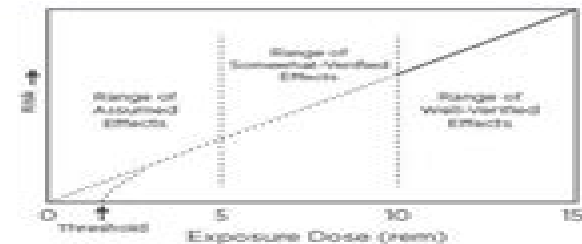

Low-Dose Radiation Therapy (LD-RT) has powerful anti-inflammatory properties and is used widely throughout the world to treat osteoarthritis, with increasing usage in the United States.¹

STUDIES SHOW A PAIN
IMPROVEMENT RATE OVER 70%

OVER 65% OF PATIENTS REPORT PAIN RELIEF
LASTING 2 YEARS AFTER INITIAL TREATMENT

Studies of LD-RT for Osteoarthritis Show No Reported Adverse Side Effects

Due to the low dosage of radiation, treatment for osteoarthritis has no reported acute side effects. A long-term review of over 1000 patients found that one patient reported some mild skin redness. No other acute or late effects were reported, and studies show the risk of secondary malignancy is negligible.

LD-RT Is Suitable Pain Management for Older Patients

LD-RT is a recommended alternative treatment for older patients with refractory osteoarthritis who have not experienced effective pain relief with other treatments.² Treatment can be given to the hands, fingers, knees, hips, ankles, shoulders, or spine.

LD-RT Is Cost-Effective

This treatment is recognized and approved by the vast majority of insurance plans. Comprehensive Cancer Centers is your trusted resource for leading-edge radiation treatments. We're proud to offer experienced, expert care to our community, providing patients with high-quality treatment options close to home.
