Low Power Communications:

Adaptive Low-Power Circuits for Wireless Communications Aleksandar Tasic, Wouter A. Serdijn, John R. Long, 2007-03-06 Adaptive radio transceivers require a comprehensive theoretical framework in order to optimize their performance Adaptive Low Power Circuits for Wireless Communications provides this framework with a discussion of joint optimization of Noise Figure and Input Intercept Point in receiver systems Original techniques to optimize voltage controlled oscillators and low noise amplifiers to minimize their power consumption while maintaining adequate system performance are also provided The experimental results presented at the end of the book confirm the utility of the proposed techniques **Low-Power**

Wireless Communication Circuits and Systems Kiat Seng Yeo, Kaixue Ma, 2018-05-03 The increasing demand for extremely high data rate communications has urged researchers to develop new communication systems Currently wireless transmission with more than one Giga bits per second Gbps data rates is becoming essential due to increased connectivity between different portable and smart devices To realize Gbps data rates millimeter wave MMW bands around 60 GHz is attractive due to the availability of large bandwidth of 9 GHz Recent research work in the Gbps data rates around 60 GHz band has focused on short range indoor applications such as uncompressed video transfer high speed file transfer between electronic devices and communication to and from kiosk Many of these applications are limited to 10 m or less because of the huge free space path loss and oxygen absorption for 60 GHz band MMW signal This book introduces new knowledge and novel circuit techniques to design low power MMW circuits and systems It also focuses on unlocking the potential applications of the 60 GHz band for high speed outdoor applications The innovative design application significantly improves and enables high data rate low cost communication links between two access points seamlessly The 60 GHz transceiver system on chip provides an alternative solution to upgrade existing networks without introducing any building renovation or external network laying works [RF Technologies for Low Power Wireless Communications](#) Tatsuo Itoh, George

Haddad, James Harvey, 2004-03-24 A survey of microwave technology tailored for professionals in wireless communications RF Technologies for Low Power Wireless Communications updates recent developments in wireless communications from a hardware design standpoint and offers specialized coverage of microwave technology with a focus on the low power wireless units required in modern wireless systems It explores results of recent research that focused on a holistic integrated approach to the topics of materials devices circuits modulation and architectures rather than the more traditional approach of research into isolated topical areas Twelve chapters deal with various fundamental research aspects of low power wireless electronics written by world class experts in each field The first chapter offers an overview of wireless architecture and performance followed by detailed coverage of Advanced GaAs based HBT designs InP based devices and circuits Si SiGe HBT technology Noise in GaN devices Power amplifier architectures and nonlinearities Planar oriented components MEMS and micromachined components Resonators filters and low noise oscillators Antennas Transceiver front end architectures With a
