Little, Robert Clayton Augur, 1921 Progress in Materials Handling and Logistics John A. White, Ira W. Pence, 2013-03-09 Material handling and logistics have become especially important to industrialists because of the competitive advantage that results from using the right methods to provide the right amount of the right material at the right place at the right time in the right condition in the right sequence in the right orientation and at the right cost But what are

the right methods The emergence of sophisticated control systems coupled with advances in hardware design has resulted in a wide variety of technological alternatives available for practically any application Yet with the emergence of just in time methods and the apparent success of the firms that have relied on the use of people and simple rules rather than technology the proper role of hardware and software in material handling and logistics is open to debate Despite all that has been accomplished to date the design of material handling and logistics systems remains an art as well as a science Regardless of whether it is people conveyors lift trucks robots guided vehicles laser scanners storage retrieval machines carousels voice encoding machine vision automatic palletizers or other methods that are appropriate selecting the right methods for moving storing and controlling material is vital It is important that the selection decision be made after consideration is given to the requirements for amount material place time condition sequence orientation and cost
