Although it has been around for two decades as a means of managing blood glucose levels in diabetics, it really began receiving a lot of attention in the general public when it was first introduced. Well-known weight loss programs such as The South Beach Diet and Nutri-System Very Healthy Eating Plan were based on the glycemic index (GI), which is designed to help people make food choices that will help them maintain a healthy weight. For example, it is easier for individuals to maintain a healthy weight if they eat foods with a low GI, such as whole grains, fruits, and vegetables, which take longer to digest and release glucose into the blood. However, it is important to note that the low glycemic diet is not the only diet that can help manage blood glucose levels. The concept of the low glycemic diet was created in the early 1980s by Dr. David Jenkins, a professor in the Department of Nutrition and Science at the University of Toronto. It was originally designed as a way of helping people manage their blood glucose levels, but it has since been used by those who want to maintain a healthier lifestyle. The glycemic index is a number that identifies low glycemic foods that will help you manage your weight. For example, whole grains, fruits, and vegetables have a low GI, while processed foods and refined carbohydrates have a high GI. It was created by measuring the changes in blood glucose levels that occur after eating different foods and then ranking them based on their effect on blood glucose levels.
