Models for Concurrency analyzes the subject in terms of events and their temporal relationship rather than on global states. It presents a comprehensive analysis of model theory applied to concurrent protocols and seeks to provide a theory of concurrency that is both intuitively appealing and rigorously based on mathematical foundations. The book is divided into three main sections. The first introduces the required concepts from model theory, details the structures that are used to model concurrency, gives an in-depth description and explanation of the semantics of a simple language that allows concurrent execution of sequential programs and deals with the question of resolving executions into higher level and lower level granularities. The second and third sections apply the theory developed to practical examples and an exposition of the producer consumer problem with details of two solutions is given. The author also deals with message passing as opposed to shared memory.

*General Technical Report RM.* , 1986      **Characterizing the Robustness of Science** Léna Soler, Emiliano Trizio, Thomas Nickles, William Wimsatt, 2012-03-22 Mature sciences have been long been characterized in terms of the successfulness, reliability or trustworthiness of their theoretical, experimental or technical accomplishments. Today many philosophers of science talk of robustness often without specifying in a precise way the meaning of this term. This lack of clarity is the cause of frequent misunderstandings since all these notions and that of robustness in particular are connected to fundamental issues which concern nothing less than the very nature of science and its specificity with respect to other human practices: the nature of rationality and of scientific progress and science's claim to be a truth conducive activity. This book offers for the first time a comprehensive analysis of the problem of robustness and in general that of the reliability of science based on several detailed case studies and on philosophical essays inspired by the so called practical turn in philosophy of science.
