Causality, Meaningful Complexity and Embodied Cognition A. Carsetti, 2010-03-10 Arturo Carsetti According to molecular Biology true invariance life can exist only within the framework of ongoing autonomous morphogenesis and vice versa With respect to this secret dialectics life and cognition appear as indissolubly interlinked In this sense for instance the inner articulation of conceptual spaces appears to be linked to an inner functional development based on a continuous activity of selection and anchorage realised on semantic grounds It is the work of invention and generation in invariance linked with the rooting of meaning which determines the evolution the leaps and punctuated equilibria the conditions related to the unfolding of new modalities of invariance an invariance which is never simple repetition and which springs on each occasion through deep level processes of renewal and recovery The selection perpetrated by meaning reveals its autonomy above all in its underpinning in an objective way the

ongoing choice of these new modalities As such it is not then concerned only with the game of possibles offering itself as a simple channel for pure chance but with providing a channel for the articulation of the le in the humus of a semantic and embodied net in order to prepare the necessary conditions for a continuous renewal and recovery of original creativity In effect it is this autonomy in inventing new possible modules of incompressibility which determines the actual emergence of new and true creativity which also takes place through the narration of the effected construction
