Material Characterization Using Ion Beams:

Material Characterization Using Ion Beams J. Thomas,2012-12-06 The extensive use of low energy accelerators in non nuclear physics has now reached the stage where these activities are recognized as a natural field of investigation Many other areas in physics and chemistry have undergone similarly spectacular development beam foil spectroscopy in atomic physics studies in atomic collisions materials implantation defects creation nuclear microanalysis and so on Now this most recent activity by itself and in its evident connection with the others has brought a new impetus to both the fundamental and the applied aspects of materials science A summer school on Material Characterization Using Ion Beams has resulted from these developments and the realization that the use of ion beams is not restricted to accelerators but covers a wide energy range in the developing technology The idea of the ion beam as a common denominator of many activities dealing with surface and near surface characterization was enthusiastically received by many scientists and a school on this subject received the positive endorsement of NATO The Advanced Study Institute on Materials Science has assumed for us the status of an institution leading to better contact among the many laboratories engaged in this field The fourth Institute in this series was held in Ajaccio Corsica between August 22 and September 12 1976 Material Characterization Using Ion Beams J Thomas,1978-01-01 Material characterization using ion beams : lectures J. Characterization and Aggregation of Implanted Atoms in Materials A. Perez,R. Coussement,2012-12-06 Explosive developments in microelectronics interest in nuclear metallurgy and widespread applications in surface science have all produced many advances in the field of ion implantation The research activity has become so intensive and so broad that the field has become divided into many specialized subfields An Advanced Study Institute covering the basic and common phenomena of aggregation seems opportune for initiating interested scientists and engineers into these various active subfields since aggregation usually follows ion implantation As a consequence Drs Perez Coussement Marest Cachard and I submitted such a proposal to the Scientific Affairs Division of NATO the approval of which resulted in the present volume For the physicist studying nuclear hyperfine interactions the consequences of aggregation of implanted atoms even at low doses need to be taken into account if the results are to be correctly interpreted For materials scientists and device engineers understanding aggregation mechanisms and methods of control is clearly essential in the tailoring of the end products

Feldman,James W. Mayer,Steward T.A. Picraux,1982-11-28 Our intention has been to write a book that would be useful to people with a variety of levels of interest in this subject Clearly it should be useful to both graduate students and workers in the field We have attempted to bring together many of the concepts used in channeling beam analysis with an indication of the origin of the ideas within fundamental channeling theory The level of the book is appropriate to senior under graduates and graduate students who have had a modern physics course work in related areas of materials science and wish to learn more about the channeling probe its strengths weaknesses and areas of further potential application To them we hope we have explained this apparent paradox of using mega electron volt ions to probe solid state phenomena that have
