High-performance Construction Materials: Science And Applications Caijun Shi, Yi-lung Mo, 2008-06-11

This book describes a number of high performance construction materials including concrete steel fiber reinforced cement fiber reinforced plastics polymeric materials geosynthetics masonry materials and coatings It discusses the scientific bases for the manufacture and use of these high performance materials Testing and application examples are also included in particular the application of relatively new high performance construction materials to design practice Most books dealing with construction materials typically address traditional materials only rather than high performance materials and as a consequence do not satisfy the increasing demands of today s society On the other hand books dealing with materials science are not engineering oriented with limited coverage of the application to engineering practice This book is thus unique in reflecting the great advances made on high performance construction materials in recent years This book is appropriate for

use as a textbook for courses in engineering materials structural materials and civil engineering materials at the senior undergraduate and graduate levels It is also suitable for use by practice engineers including construction materials mechanical and civil engineers Materials Science in Construction Ash Ahmed, John Sturges, 2015 Materials Science in Construction explains the science behind the properties and behaviour of construction's most fundamental materials metals cement and concrete polymers timber bricks and blocks glass and plaster In particular the critical factors affecting in situ materials are examined such as deterioration and the behaviour and durability of materials under performance An accessible easy to follow approach makes this book ideal for all diploma and undergraduate students on construction related courses taking a module in construction materials *Materials Science of Concrete* Andrew J.
