Corrosion and Materials Selection Alireza Bahadori,2014-08-11 The petroleum and chemical industries contain a wide variety of corrosive environments many of which are unique to these industries Oil and gas production operations consume a tremendous amount of iron and steel pipe tubing pumps valves and sucker rods Metallic corrosion is costly However the cost of corrosion is not just financial Beyond the huge direct outlay of funds to repair or replace corroded structures are the indirect costs natural resources potential hazards and lost opportunity Wasting natural resources is a direct contradiction to the growing need for sustainable development By selecting the correct material and applying proper corrosion protection methods these costs can be reduced or even eliminated This book provides a minimum design requirement for consideration when designing systems in order to prevent or control corrosion damage safely and economically and addresses Corrosion problems in petroleum and chemical industries Requirements for corrosion control Chemical control of corrosive environments Corrosion inhibitors in refineries and petrochemical plants Materials selection and service life of materials Surface preparation protection and maintainability Corrosion monitoring plant inspection techniques and laboratory corrosion testing techniques Intended for engineers and industry personnel working in the petroleum and chemical industries this book is also a valuable resource for research and development teams safety engineers corrosion specialists and researchers in chemical engineering engineering and materials science

Bradford, 1993-02-18 Human beings undoubtedly became aware of corrosion just after they made their first metals

These people probably began to control corrosion very soon after that by trying to keep metal away from corrosive environments. Bring your tools in out of the rain and Clean the blood off your sword right after battle would have been early maxims. Now that the mechanisms of corrosion are better understood more techniques have been developed to control it. My corrosion experience extends over 10 years in industry and research and over 20 years teaching corrosion courses to university engineering students and industrial consulting. During that time I have developed an approach to corrosion that has successfully trained over 1500 engineers. This book treats corrosion and high temperature oxidation separately. Corrosion is divided into three groups: 1 chemical dissolution including uniform attack; 2 electrochemical corrosion from either metallurgical or environmental cells; and 3 corrosive mechanical interactions. It seems more logical to group corrosion according to mechanisms than to arbitrarily separate them into 8 or 20 different types of corrosion as if they were unrelated. University students and industry personnel alike generally are afraid of chemistry and consequently approach corrosion theory very hesitantly. In this text the electrochemical reactions responsible for corrosion are summed up in only five simple half cell reactions. When these are combined on a polarization diagram which is explained in detail the electrochemical processes become obvious. *Materials Performance*, 2006
