Artificial Intelligence in Real-time Control M. G. Rodd, Gregory J. Suski,1989 **Embedded Systems Programming** ,1992 **Dr. Dobb's Journal** ,2001 **Real-Time PDE-Constrained Optimization** L.T. Biegler,2007-07-12 a timely contribution to a field of growing importance This carefully edited book presents a rich collection of chapters ranging from mathematical methodology to emerging applications I recommend it to students as a rigorous and comprehensive presentation of simulation based optimization and to researchers as an overview of recent advances and challenges in the field Jorge Nocedal Professor Northwestern University Many engineering and scientific problems in design control and parameter estimation can be formulated as optimization problems that are governed by partial differential equations PDEs The complexities of the PDEs and the requirement for rapid solution pose significant difficulties A particularly challenging class of PDE constrained optimization problems is characterized by the need for real time solution i e in time scales that are sufficiently rapid to support simulation based decision making Real Time PDE Constrained Optimization the first book devoted to real time

optimization for systems governed by PDEs focuses on new formulations methods and algorithms needed to facilitate real time PDE constrained optimization. In addition to presenting state of the art algorithms and formulations the text illustrates these algorithms with a diverse set of applications that includes problems in the areas of aerodynamics biology fluid dynamics medicine chemical processes homeland security and structural dynamics. Despite difficulties there is a pressing need to capitalize on continuing advances in computing power to develop optimization methods that will replace simple rule based decision making with optimized decisions based on complex PDE simulations. Audience The book is aimed at readers who have expertise in simulation and are interested in incorporating optimization into their simulations who have expertise in numerical optimization and are interested in adapting optimization methods to the class of infinite dimensional simulation problems or who have worked in offline optimization contexts and are interested in moving to online optimization.
