## Next Hundred Years:

**The Next 100 Years** George Friedman, 2010-01-26 Conventional analysis suffers from a profound failure of imagination It imagines passing clouds to be permanent and is blind to powerful long term shifts taking place in full view of the world George Friedman In his long awaited and provocative new book George Friedman turns his eye on the future offering a lucid highly readable forecast of the changes we can expect around the world during the twenty first century He explains where and why future wars will erupt and how they will be fought which nations will gain and lose economic and political power and how new technologies and cultural trends will alter the way we live in the new century The Next 100 Years draws on a fascinating exploration of history and geopolitical patterns dating back hundreds of years Friedman shows that we are now for the first time in half a millennium at the dawn of a new era with changes in store including The U S Jihadist war will conclude replaced by a second full blown cold war with Russia China will undergo a major extended internal crisis and Mexico will emerge as an important world power A new global war will unfold toward the middle of the century between the United States and an unexpected coalition from Eastern Europe Eurasia and the Far East but armies will be much smaller and wars will be less deadly Technology will focus on space both for major military uses and for a dramatic new energy resource that will have radical environmental implications The United States will experience a Golden Age in the second half of the century Written with the keen insight and thoughtful analysis that has made George Friedman a renowned expert in geopolitics and forecasting The Next 100 Years presents a fascinating picture of what lies ahead For continual updated analysis and supplemental material go to [www.geopoliticalfutures.com](http://www.geopoliticalfutures.com)

### **The Next Hundred Years . . . Then and Now**

Robert H. Cartmill, 2002 Time present and time past are both perhaps present in time future and time future contained in time past T S Eliot Everybody is interested in the future Based on present estimates of the world population and predictions of human life expectancy most people now alive will spend more than half their lives in the 21st century Starting today everybody has a future But what will that future be Of course nobody really knows so people have to guess There is no shortage of people who are volunteering guesses now at the beginning of the new century Newspaper editors and columnists TV reporters financial pundits government agencies and many others are filling the media with their forecasts for the next hundred years The question is How good are these predictions This in turn leads to more questions Are there any criteria to distinguish a good likely to come true prediction from a bad not likely to come true prediction Are forecasts of future events in the field of the sciences more likely true than forecasts say in politics economics or social relationships The author firmly believes that the best way to answer these questions is to take advantage of the past At the beginning of the 20th century experts made the same kinds of forecasts for the next hundred years then These forecasts have been collected grouped into six categories and consistently graded by comparing the predictions against the history of the 20th century After this grading the author analyzed the forecasts to discover which methods worked best and those that failed Beyond just determining right

wrong or in between I checked for things that happened but were not predicted This is critical for estimating the limitations of today s predictions Did anybody predict that a man would walk on the moon or that countless communications satellites would be in orbit Did anyone forecast the rise and fall of Communism in Russia By seeing where our forebears went seriously wrong or were uncannily accurate we should more ably judge the current forecasts for the next century or at least not fall into grave error Then by combining this analysis with the best evaluation techniques of today s futurists the author examines and evaluates current forecasts for the next hundred years now Strangely enough this simple logical and straightforward method of evaluating the present predictions has never been done before Also included is a tantalizing quiz that asks readers to predict some possible events of the 21st century    The Next Hundred Years Harrison Brown,John Weir,1961    **Annual Report** Indiana.
