Morality Mortality Death And Whom To Save From It:

Morality, Mortality: Death and whom to save from it Frances Myrna Kamm,1993 **Morality, Mortality** F. M. Kamm,1998-05-07 Why is death bad for us even on the assumption that it involves the absence of experience Is it worse for us than prenatal nonexistence Kamm begins by considering these questions critically examining some answers other philosophers have given She explores in detail suggestions based on our greater concern over the loss of future versus past goods and those based on the insult to persons which death involves In the second part Kamm deals with the question Whom should we save from death if we cannot save everyone She considers whether and when the numbers of lives we can save matter in our choice and whether the extra good we achieve if we save some lives rather than others should play a role in deciding whom to save Issues such as fairness solidarity the role of random decision procedures and the relation between subjective and objective points of view are discussed with an eye to properly incorporating these into a nonconsequentialist ethical theory In conclusion the book examines specifically what differences between persons are relevant to the distribution of any scarce resource discussing for example the distribution and acquisition of bodily organs for transplantation Kamm provides criticism of some current procedures for distribution and acquisition of a scarce resource and makes suggestions for alternatives

Medical Benefit and the Human Lottery Duff R. Waring,2008-01-18 Bioethicists moral philosophers and social policy analysts have long debated about how we should decide who shall be saved with scarce lifesaving resources when not all can be saved It is often claimed that it is fairer to save younger persons and that age is an ethically relevant consideration in such tragic decisions Medical benefit should be maximized and final selection should aim to minimize the contaminating influence of chance These claims

are challenged by Duff R Waring in *Medical Benefit and the Human Lottery* one of the few books that attempts a sustained defence of random patient selection. This book combines ethics and political philosophy in its novel and strict egalitarian approach to patient selection for transplantable organs. Waring addresses the question of whether we should choose between lives on the basis of fair chances or best outcomes. He argues that final selection criteria should be based on fair chances that equalize opportunity as opposed to best outcomes. His defence of hardy egalitarianism aims to show that random selection by lottery can affirm both a common humanity and the equal value of lives. The notion of patient selection by lottery has not fared well in bioethics and has been regarded by some as a moral affront. Waring argues that a human selection lottery may be neither as crude nor as ethically anomalous as some have supposed. Indeed it can reflect a familiar conception of equality as a political and moral ideal. This conception abstracts from many undeniable differences between patients and claims that scarce resources should be allocated on the principled assumption that each of their lives is equally worth saving. The book is also notable for its critiques of some recent utilitarian notions of medical benefit which can have an age biased impact on elderly patients. Waring then argues against the leading contemporary age based approaches to patient selection. He explores the way random selection by lottery can affirm his egalitarian ethos in cases where eligible transplant candidates have each passed a threshold level of prospective medical benefit that has been set by democratic deliberation. Taming chance with a human lottery is defended as the most lucid means of ensuring equal opportunity. In so doing Waring argues that we give the principle of equal concern and respect a radical expression above a noncomparative threshold of medical benefit each candidate can have an equal claim to life.

Social Justice in Practice Juha Räikkä, 2014-07-08

In this book the practical dimension of social justice is explained using the analysis and discussion of a variety of well known topics. These include the relation between theory and practice in normative political philosophy, the issue of justice under uncertainty, the question of whether we can and should unmask social injustices by means of conspiracy theories, the issues of privacy and the right to privacy, the issue of how certain psychological states may affect our moral obligations in particular the obligation to treat others fairly, and finally the concepts of morality, fairness and self deception. The primary goal of the book is to provide readers with an updated discussion of some important and practical social justice issues. These issues are presented from a new perspective based on the author's research. It is hoped that bringing these topics together in a single book will promote the emergence of new insights and challenges for future research.

Juha Räikkä is a professor at the Department of Philosophy at the University of Turku, Finland. His research focuses on ethics and political philosophy.

Prevention and the Limits of the Criminal Law Andrew Ashworth, Lucia Zedner, Patrick Tomlin, 2013-01-31

Exploring the principles and values that should guide and limit the state's use of preventive techniques that involve coercion against the individual, this volume arises from a three year study of Preventive Justice. The contributions examine whether and when preventive measures are justified, whether within or outwith the criminal law and whether they signal a larger change in the architecture of security. Preventive

measures include controversial crime control approaches such as pre inchoate offences pre trial detention restraining orders and prevention detention of the dangerous There are good reasons to justify state use of coercion to protect the public from harm but while the rationales and justifications for state punishment have been extensively explored the scope limits and principles of preventive justice have not received the same attention This volume written by world renowned scholars from different disciplinary backgrounds and jurisdictions redresses the balance assessing the foundations for the range of coercive measures that states now take in the name of prevention and public protection

Transplantation Ethics

Robert M. Veatch,2000 Three decades after the first heart transplant surgery stunned the world organs including eyes lungs livers kidneys and hearts are transplanted every day But despite its increasingly routine nature or perhaps because of it transplantation offers enormous ethical challenges A medical ethicist who has been involved in the organ transplant debate for many years Robert M Veatch explores a variety of questions that continue to vex the transplantation community offering his own solutions in many cases Ranging from the most fundamental questions to recently emerging issues Transplantation Ethics is the first complete and systematic account of the ethical and policy controversies surrounding organ transplants Veatch structures his discussion around three major topics the definition of death the procurement of organs and the allocation of organs He lobbies for an allocation system administered by nonphysicians that considers both efficiency and equity that takes into consideration the patient s age and previous transplant history and that operates on a national rather than a regional level Rich with case studies and written in an accessible style this comprehensive reference is intended for a broad cross section of people interested in the ethics of transplantation from either the medical or public policy perspective patients and their relatives transplantation professionals other health care professionals and administrators social workers members of organ procurement organizations and government officials involved in the regulation of transplants
