Media Management and Artificial Intelligence Alex Connock,2022-11-18 This cutting edge textbook examines contemporary media business models in the context of Artificial Intelligence AI and digital transformation AI has dramatically impacted media production and distribution from recommendation engines to synthetic humans from video to text tools to natural language models AI is really the change

agent of the media industry answered a natural language generation model when AI was asked about the subject of this book. It will open incredible opportunities. This book seeks to explore them. The media is examined through four sections: Principles, maps, business models and the key tools of AI. Platforms covers distribution channels in Games, Streamers, Social Networks, Broadcast and Digital Publishing. Producers covers the engines of content making including Scripted Entertainment, Factual Content, Marketing, Creators and Music. Finally, Pioneers covers emerging sectors of Podcasting, Esports, the Metaverse and other AI driven developments. Then in each chapter a standard value creation model is applied mapping a single sector through development, production, distribution and monetisation. Diverse case studies are analysed from India, Nigeria, South Korea, South Africa, France, the Netherlands, the US, the UK, Denmark and China around creative entrepreneurship, revenue models, profit drivers, rights and emerging AI tools. Questions are provided for each case whilst chapter summaries cement learning. Applied and technology focused, this text offers core reading for advanced undergraduate and postgraduates studying Media Management or the relationship between Entertainment, Media and Technology. Online resources include chapter by chapter PowerPoint slides and an Instructor's Manual with further exercises and case studies.

Future of Work. How Artificial Intelligence will impact the Future Workplace Aline Hamm, 2019-11-21 Master's Thesis from the year 2019 in the subject Business economics, Business Management, Corporate Governance, grade 1.1 University of Applied Sciences Saarbrücken, language English, abstract: This master thesis gives an overview of the topic Artificial Intelligence (AI) and analyses respective effects on jobs related employee tasks and skills. The practical empirical research examines the perceptions of AI in Saarland SMEs focusing on the actual use and their opinion of AI changing the workplace. Qualitative interviews with SMEs in Saarland were compared to existing surveys done concerning AI. 20 interviews have been conducted in total and data from the surveys was analysed with an explaining methodology as a confirmatory research approach. Results of the empirical research show a lack of knowledge in both AI organizational implementation and the evaluation of existing job profiles impacted by AI. A two pillar roadmap consisting of Technology and People is developed by taking existing evaluation models into account and developing an own AI implementation Canvas. This thesis is a contribution to the currently rarely discussed topic of AI in Saarland. Artificial Intelligence (AI) is not a new topic and has been researched since the 1940s. But due to technological improvements like increased computer power at reduced costs and the occurrence of Big Data it is the most promising technology driving digitalization.

An Introduction to Universal Artificial Intelligence Marcus Hutter, David Quarel, Elliot Catt, 2024-05-28 An Introduction to Universal Artificial Intelligence provides the formal underpinning of what it means for an agent to act intelligently in an unknown environment. First presented in Universal Algorithmic Intelligence Hutter 2000, UAI offers a framework in which virtually all AI problems can be formulated and a theory of how to solve them. UAI unifies ideas from sequential decision theory, Bayesian inference and algorithmic information theory to construct AIXI, an optimal reinforcement learning agent that learns to act optimally in unknown environments. AIXI

is the theoretical gold standard for intelligent behavior. The book covers both the theoretical and practical aspects of UAI. Bayesian updating can be done efficiently with context tree weighting and planning can be approximated by sampling with Monte Carlo tree search. It provides algorithms for the reader to implement and experimental results to compare against. These algorithms are used to approximate AIXI. The book ends with a philosophical discussion of Artificial General Intelligence. Can super intelligent agents even be constructed? Is it inevitable that they will be constructed and what are the potential consequences? This text is suitable for late undergraduate students. It provides an extensive chapter to fill in the required mathematics probability information and computability theory background. Artificial Intelligence in the Capitalist University John Preston, 2021-10-31

Using Marxist critique this book explores manifestations of Artificial Intelligence AI in Higher Education and demonstrates how it contributes to the functioning and existence of the capitalist university. Challenging the idea that AI is a break from previous capitalist technologies the book offers nuanced examination of the impacts of AI on the control and regulation of academic work and labour on digital learning and remote teaching and on the value of learning and knowledge. Applying a Marxist perspective Preston argues that commodity fetishism surveillance and increasing productivity ushered in by the growth of AI further alienates and exploits academic labour and commodifies learning and research. The text puts forward a solid theoretical framework and methodology for thinking about AI to inform critical and revolutionary pedagogies. Offering an impactful and timely analysis this book provides a critical engagement and application of key Marxist concepts in the study of AI's role in Higher Education. It will be of interest to those working or researching in Higher Education.

Applied Biomedical Engineering Using Artificial Intelligence and Cognitive Models Jorge Garza Ulloa, 2021-11-30

Applied Biomedical Engineering Using Artificial Intelligence and Cognitive Models focuses on the relationship between three different multidisciplinary branches of engineering Biomedical Engineering Cognitive Science and Computer Science through Artificial Intelligence models. These models will be used to study how the nervous system and musculoskeletal system obey movement orders from the brain as well as the mental processes of the information during cognition when injuries and neurologic diseases are present in the human body. The interaction between these three areas are studied in this book with the objective of obtaining AI models on injuries and neurologic diseases of the human body studying diseases of the brain spine and the nerves that connect them with the musculoskeletal system. There are more than 600 diseases of the nervous system including brain tumors epilepsy Parkinson's disease stroke and many others. These diseases affect the human cognitive system that sends orders from the central nervous system CNS through the peripheral nervous systems PNS to do tasks using the musculoskeletal system. These actions can be detected by many Bioinstruments Biomedical Instruments and cognitive device data allowing us to apply AI using Machine Learning Deep Learning Cognitive Computing models through algorithms to analyze detect classify and forecast the process of various illnesses diseases and injuries of the human body.

Applied Biomedical Engineering Using Artificial Intelligence and Cognitive Models provides readers with the study of injuries illness and neurological diseases of the human body through Artificial Intelligence using Machine Learning ML Deep Learning DL and Cognitive Computing CC models based on algorithms developed with MATLAB and IBM Watson Provides an introduction to Cognitive science cognitive computing and human cognitive relation to help in the solution of AI Biomedical engineering problems Explain different Artificial Intelligence AI including evolutionary algorithms to emulate natural evolution reinforced learning Artificial Neural Network ANN type and cognitive learning and to obtain many AI models for Biomedical Engineering problems Includes coverage of the evolution Artificial Intelligence through Machine Learning ML Deep Learning DL Cognitive Computing CC using MATLAB as a programming language with many add on MATLAB toolboxes and AI based commercial products cloud services as IBM Cognitive Computing IBM Watson IBM Watson Studio IBM Watson Studio Visual Recognition and others Provides the necessary tools to accelerate obtaining results for the analysis of injuries illness and neurologic diseases that can be detected through the static kinetics and kinematics and natural body language data and medical imaging techniques applying AI using ML DL CC algorithms with the objective of obtaining appropriate conclusions to create solutions that improve the quality of life of patients *Playing God* Nick Spencer,Hannah

Waite,2024-03-21 Could science one day defeat death What would alien contact mean for humanity Has medicine finally found a cure for sadness Will AI replace us For too long the science and religion debate has fixated on creation evolution cosmology miracles and quantum theory But this argue Nick Spencer and Hannah Waite is a mistake Religious belief has survived and thrived under many different models of the universe It was never intended to be a competing explanation for the science of any age Where science and religion really do come together sometimes furiously sometimes fruitfully is over the status and nature of the human And that has never been more important than today Whether it's the quest for immortality or the search for alien life the treatment of pandemics or animal personhood AI or mental health abortion or genetic editing science is making advances that are posing huge questions about what it means to be human whether we should change ourselves and how far we should play God These developments are only going to grow in significance Playing God brings readers up to date with the latest developments but also draws out their moral and religious dimensions In so doing it shows how the future of science and religion is inextricably tied up with the future of humanity
