Bowker's Complete Video Directory, 1999 ,1999 **Good Science? The Growing Gap between Power and Education** Georgina Marjorie Stewart,2010-01-01 This work uses narrative research including accounts of personal experiences to explore the margins of science and ethics Boundaries between science and other cultural and disciplinary forms of knowledge are illuminated through studying the inter relationships between identity knowledge and power using narratives both in and as a form of philosophical reflection on educational practice The story centres on a contemporary real world context of minority language science education showing how this fits into longstanding trans disciplinary intercultural debates about the nature of science and of knowledge in general The narrative form is used to bridge and interweave the multiple discourses influencing both the real world context and the approach to its investigation This analysis clarifies the linkages between paradigms of critical postcolonial research and post positivist epistemology and illustrates how social science including educational research may use science and technology to assist rather than delimit our understanding of complex human phenomena such as education culture language and science **Film Review** ,1990 [Colonial Captivity during the First World War](#) Mahon Murphy,2018 This new analysis of internment outside Europe helps us to understand the First World War as a truly global conflict [The Publishers' Trade List Annual](#) ,1982 **Waterstone's Guide to Books**

The Writers Directory ,2013 *The Settlement of the American Continents* C. Michael Barton,2004-10 When many scholars are asked about early human settlement in the Americas they might point to a handful of archaeological sites as evidence Yet the process was not a simple one and today there is no consistent argument favoring a particular scenario for the peopling of the New World This book approaches the human settlement of the Americas from a biogeographical perspective in order to provide a better understanding of the mechanisms and consequences of this unique event It considers many of the questions that continue to surround the peopling of the Western Hemisphere focusing not on sites dates and artifacts but rather on theories and models that attempt to explain how the colonization occurred Unlike other studies this book draws on a wide range of disciplines archaeology human genetics and osteology linguistics ethnology and ecology to present the big picture of this migration Its wide ranging content considers who the Pleistocene settlers were and where they came from their likely routes of migration and the ecological role of these pioneers and the consequences of colonization Comprehensive in both geographic and topical coverage the contributions include an explanation of how the first inhabitants could have spread across North America within several centuries the most comprehensive review of new mitochondrial DNA and Y chromosome data relating to the colonization and a critique of recent linguistic theories Although the authors lean toward a conservative rather than an extreme chronology this volume goes beyond the simplistic emphasis on dating that has dominated the debate so far to a concern with late Pleistocene forager adaptations and how foragers may have coped with a wide range of environmental and ecological factors It offers researchers in this exciting field the most complete summary of current knowledge and provides non specialists and general readers with new answers to the questions surrounding the origins of the first Americans **Gopen's Guide to Closed Captioned Video** Stuart Gopen,1993 [The Whole Story](#) John E.
