General Accounting Office, 1991 [An Analysis of the Potential for Using Over-The-Horizon Radar Systems for Space Surveillance](#) Matthew Colbert, 2025-05-22 The Australian Defence Force is investigating the development of a space surveillance system While several dedicated facilities for space surveillance are in operation around the world Australia s Over The Horizon Radar OTHR network has some potential for this role The OTHR operates in the HF band and is constrained by the propagation effects of the ionosphere A spherically stratified ionospheric model and a model for a nominal OTHR antenna are developed that allow calculation of path propagation power distribution and clutter returns A software based radar receiver processing system is modeled to determine detection probabilities and the minimum detectable radar cross section of targets in typical low earth orbit LEO trajectories The high clutter power levels coupled with long target ranges and high velocities mean that range Doppler tradeoffs have a great impact on the resulting detection capabilities While the system as modeled has the potential to provide some coverage for LEO targets operational constraints mean the necessary conditions for detection of space targets would rarely be met while the system is involved in traditional OTHR tasking Further the long wavelengths and large antenna beams mean the accuracy of any positioning information is low This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it This work was reproduced from the original artifact

Continental United States. Revised ,1974 *Understanding Radar Systems* Simon Kingsley,Shaun Quegan,1999 What is radar What systems are currently in use How do they work Understanding Radar Systems provides engineers and scientists with answers to these critical questions focusing on actual radar systems in use today It s the perfect resource for those just entering the field or a quick refresher for experienced practitioners The book leads readers through the specialized language and calculations that comprise the complex world of modern radar engineering as seen in dozens of state of the art radar systems The authors stress practical concepts that apply to all radar keeping math to a minimum Most of the book is based on real radar systems rather than theoretical studies The result is a valuable easy to use guide that makes the difficult parts of the field easier and helps readers do performance calculations quickly and easily **Development of Over-the-Horizon**

Over-the-horizon Radar E. K. Law,1995 **Information on Over-the-Horizon Radar** ,1965 *HF Over-the-horizon Radar System Performance Analysis* ,2007 The basic concept of the structure and properties of the ionosphere are discussed to explain how the performance of the over the horizon radar OTHR system is affected An overview of the OTHR system

characteristics and performance are presented along with some applications currently used around the world including their geographic location and historical background. The waveforms used for the OTHR systems include simple pulse, pulse Doppler, phased coded pulse, frequency modulated continuous wave (FMCW) and frequency modulated interrupted continuous wave (FMICW). Other characteristics such as target detection methods and the skywave OTHR range equation are also discussed. Simulation results indicate that the minimum required input signal to noise ratio (SNR) for a target with 100 m² cross section at 3 500 km footprint range is 52.4 dB at c/f 14.5 MHz. In addition, a noncooperative intercept receiver requires a minimum input SNR of 94 dB for a square law detector and 97 dB for a linear detector for interception at a footprint range of 3 500 km at c/f 14.5 MHz. A model of the maximum detection range for the Chinese FMCW OTH backscatter OTH B radar was developed in MATLAB. An intercept receiver maximum interception range is also analyzed. A ray tracing technique is also used in PROPLAB to present a more detailed analysis. The analysis includes the electron density profile, the maximum usable frequency, the critical frequency of the layers, the skip zone and the signal quality. The simulations focused on the Chinese OTH B radar system are to investigate the Chinese surveillance capabilities.

The Development of Over-the-horizon Radar in Australia D. H. Sinnott, 1988 *Over-the-horizon Radar* F. Tom Berkey, 1998 **Information on Over-the-Horizon Radar**, 1964. NRL Memo Report 1422 of May 1963 was a direct response to a DOD request for information on a MADRE type over the horizon radar for prototype installation on foreign soil. A follow up joint effort by USAF and NRL to arrive at some additional cost information was made on or about 1 November 1963. Further DOD memo of 7 February 1964 directed mainly to USAF and Navy in substance called for a study phase exercise so called Phase 1 among qualified commercial concerns on equipment costs and economic trade offs for a state of the art MADRE like radar. Navy as consultant to USAF's Rome Air Development Center has prepared NRL Memo Report 1537 which is a detailed Work Statement Specification for such an OTH radar. Memo Report 1537 is in detail and should be used as the source for equipment specifications and equipment employment. Although this report addresses itself to a different mission from CONUS protection, a station complement suitable for SLEM detection simply involves additional antenna complexity and a redundancy in transmitters signal processing and data handling to satisfy the SLEM threat. It is unfortunate in the area of costing that the efforts of the separate Air Force and Navy committees operating under DOD Memo R E Log No 64 1502 will not be able to digest the detailed costing of a commercial firm nature which will be one of the direct results of the aforementioned Study Phase. The commercial concern response to Phase 1 has a deadline of 1 September 1964. Subsequently USAF and NRL expect to digest the submitted material and report to DOD their mutual findings with recommendations. In consequence the cost information hurriedly prepared presented here is only of a quasi commercial flavor but believed to be quite realistic in the totals though discrepancies can be found.
