Oxford First Book of Maths Rose Griffiths,1999 Oxford First Book of Maths will introduce children of five and upwards to early maths concepts and the vocabulary that they need to describe these new ideas It will help them understand the role that maths plays in their everyday lives and promote confidence in discussing them Definitions are clear and accurate and are illustrated with examples and additional activities The Malvern College Register 1865-1914 R. Unconventional Essays on the Nature of Mathematics Reuben Hersh,2006-01-16 This book comes from the Internet Browsing the Web I stumbled on philosophers cognitive scientists sociologists computer scientists even mathematicians saying original provocative things about mathematics And many of these people had probably never heard of each other So I have collected them here This way they can read each other's work I also bring back a few provocative oldies that deserve publicity The authors are philosophers mathematicians a cognitive scientist an anthropologist a computer scientist and a couple of sociologists Among the mathematicians are two Fields Prize winners and two Steele Prize winners None are historians I regret to say but there are two historically oriented articles These essays don't share any common program or ideology The standard for admission was Nothing boring Nothing trite nothing trivial Every essay is challenging thought provoking and original Back in the 1970s when I started writing about mathematics instead of just doing mathematics I had to complain about the literature Philosophy of science was already well into its modern revival largely stimulated by the book of Thomas Kuhn But philosophy of mathematics still seemed to be mostly foundationist ping pong in the ancient style of Rudolf Carnap or Willard Van Ormond Quine The great exception was Proofs and Refutations by Imre Lakatos But that exciting book was still virtually unknown and unread by either mathematicians or philosophers I wrote an article entitled Introducing Imre Lakatos in the Mathematical Intelligencer in 1978 **House documents** ,1896 *Rugby School Register: From May 1874 to May 1904* Rugby School,1904 *The Admission Registers of St. Paul's School from 1905. to 1905.* St. Paul's School (London, England),1906 **The Public Schools Year Book** ,1905 *The Malvern register, compiled and arranged by L.S. Mathematical Practitioners and the Transformation of Natural Knowledge in Early Modern Europe Lesley B. Cormack,Steven A. Walton,John A. Schuster,2017-03-15 This book argues that we can only understand transformations of nature studies in the Scientific Revolution if we take seriously the interaction between practitioners those who know by doing

and scholars those who know by thinking These are not in opposition however Theory and practice are end points on a continuum with some participants interested only in the practical others only in the theoretical and most in the murky intellectual and material world in between It is this borderland where influence appropriation and collaboration have the potential to lead to new methods new subjects of enquiry and new social structures of natural philosophy and science The case for connection between theory and practice can be most persuasively drawn in the area of mathematics which is the focus of this book Practical mathematics was a growing field in early modern Europe and these essays are organised into three parts which contribute to the debate about the role of mathematical practice in the Scientific Revolution First they demonstrate the variability of the identity of practical mathematicians and of the practices involved in their activities in early modern Europe Second readers are invited to consider what practical mathematics looked like and that although practical mathematical knowledge was transmitted and circulated in a wide variety of ways participants were able to recognize them all as practical mathematics Third the authors show how differences and nuances in practical mathematics typically depended on the different contexts in which it was practiced social cultural political and economic particularities matter Historians of science especially those interested in the Scientific Revolution period and the history of mathematics will find this book and its ground breaking approach of particular interest Proceedings of the Royal Society of London Royal Society (Great Britain),1916 Publishes research papers in the mathematical and physical sciences Continued by Proceedings Mathematical and physical sciences and Proceedings Mathematical physical and engineering sciences **Questions and exercises in elementary mathematics** Palaestra Oxoniensis,1884
