**Hearings** United States. Congress. House. Committee on Interstate and Foreign Commerce, 1970      *The Janus-Face of Language: Where Are the Emotions in Words and the Words in Emotions?* Cornelia Herbert, Thomas Ethofer, Andreas J. Fallgatter, Peter Walla, Georg Northoff, 2018-09-28 Language has long been considered independent from emotions In the last few years however research has accumulated empirical evidence against this theoretical belief of a purely cognitive based foundation of language In particular through research on emotional word processing it has been shown that processing of emotional words activates emotional brain structures elicits emotional facial expressions and modulates action tendencies of approach and avoidance probably in a similar manner as processing of non verbal emotional stimuli does In addition it has been shown that emotional content is already processed in the visual cortex in a facilitated manner which suggests that processing of emotional language content is able to circumvent in depth semantic analysis Yet this is only one side of the coin Very recent research putting words into context suggests that language may also construe emotions and that by studying word processing one can provide a window to one s own feelings All in all the empirical observations support the thesis of a close relationship between language and emotions at the level of word meaning as a specific evolutionary achievement of the human species As such this relationship seems to be different from the one between emotions and speech where emotional meaning is conveyed by nonverbal features of the voice But what does this relationship between written words and emotions theoretically imply for the processing of emotional information The present Research Topic and its related articles aim to provide answers to this question This book comprises several experimental studies investigating the brain structures and the time course of emotional word processing Included are studies examining the affective core dimensions underlying affective word processing and studies that show how these basic affective dimensions influence word processing in general as well as the interaction between words feelings and expressive behavior In addition new impetus comes from studies that on the one hand investigate how task sublexical and intrapersonal factors influence emotional word processing and on the other hand extend emotional word processing to the domains of social context and self related processing Finally future perspectives are outlined including research on emotion and language acquisition culture and multilingualism In summary this textbook offers scientists from different disciplines insight into the neurophysiological behavioral and subjective mechanisms underlying emotion and language interactions It gives new impulses to existing theories on the embodiment of language and emotion and provides new ways of looking at emotion cognition interactions      *Beyond Dissociation* Yves Rossetti, Antti Revonsuo, 2000 Analysis and dissociation have proved to be useful tools to understand the basic functions of the brain and the mind which therefore have been decomposed to a multitude of ever smaller subsystems and pieces by most scientific approaches However the understanding of complex functions such as consciousness will not succeed without a more global consideration of the ways the mind brain works This implies that synthesis rather than analysis should be applied to the brain

The present book offers a collection of contributions ranging from sensory and motor cognitive neuroscience to mood management and thought which all focus on the dissociation between conscious explicit and nonconscious implicit processing in different cognitive situations. The contributions in this book clearly demonstrate that conscious and nonconscious processes typically interact in complex ways. The central message of this collection of papers is: In order to understand how the brain operates as one integrated whole that generates cognition and behaviour we need to reassemble the brain and mind and put all the conscious and nonconscious pieces back together again.

**Human Conduct** Charles Clinton Peters, 1918      *The Musician's Mind* Antoinette Feleky, 1920      *Relationship Processes and Resilience in Children with Incarcerated Parents* Julie Poehlmann, J. M. Eddy, Patricia J. Bauer, 2013-07-10. Children with incarcerated parents are at risk for a variety of problematic outcomes, yet research has rarely examined protective factors or resilience processes that might mitigate such risk in this population. In this volume we present findings from five new studies that focus on child or family level resilience processes in children with parents currently or recently incarcerated in jail or prison. In the first study empathic responding is examined as a protective factor against aggressive peer relations for 210 elementary school age children of incarcerated parents. The second study further examines socially aggressive behaviors with peers with a focus on teasing and bullying in a sample of 61 children of incarcerated mothers. Emotion regulation is examined as a possible protective factor. The third study contrasts children's placement with maternal grandmothers versus other caregivers in a sample of 138 mothers incarcerated in a medium security state prison. The relation between a history of positive attachments between mothers and grandmothers and the current cocaregiving alliance are of particular interest. The fourth study examines coparenting communication in depth on the basis of observations of 13 families with young children whose mothers were recently released from jail. Finally in the fifth study the proximal impacts of a parent management training intervention on individual functioning and family relationships are investigated in a diverse sample of 359 imprisoned mothers and fathers. Taken together these studies further our understanding of resilience processes in children of incarcerated parents and their families and set the groundwork for further research on child development and family resilience within the context of parental involvement in the criminal justice system.
