## **Moon Illusion:**

*The Moon Illusion* Maurice Hershenson, 2013-05-13 This unique volume attempts to answer one of mankind's oldest puzzles why the moon appears to be larger and closer on the horizon than when it is high in the sky Over the centuries many viable solutions have been proposed for this psychological phenomenon The Moon Illusion presents papers by major theorists striving to explain the illusion and providing commentaries on the works of others Research on the moon illusion has been scattered throughout journals in many disciplines including philosophy physiology physics and psychology As the first publication to present a comprehensive treatment of the problem this book is of vital interest to professionals whose major concern is visual perception experimental psychology or the neurosciences Of additional interest to those whose focus is physics or astronomy

**The Mystery of the Moon Illusion** Helen Elizabeth Ross, 2002 Since the dawn of time one particular illusion has fascinated the greatest philosophers physicists and psychologists why does the moon appear so much larger on the horizon than when high up in the sky This text investigates this illusion Psychology Don H.

Hockenbury, Sandra E. Hockenbury, 2002-07-19 New edition of the Hockenburys text which draws on their extensive teaching and writing experiences to speak directly to students who are new to psychology *Effect of Observer Elevation on the*

*Moon Illusion* James Edward Hamilton, 1964 A study was made to determine if an increase in elevation of an observer above terrain causes a change in the magnitude of the moon illusion and estimation of distance upon terrain A comparison was made to determine a relationship between the magnitude of the illusion at different observer elevations and the corresponding estimation of distance It was found that a general decrease in the magnitude of the moon illusion coincides with a general increase in estimated distance when an observer ascends from a point above a terrain Evidence is lacking to support the apparent distance theory when an observer ascends above terrain

**Perceiving in Depth, Volume 3: Other Mechanisms of Depth Perception** Ian P. Howard, 2012-01-27 The three volume work *Perceiving in Depth* is a sequel to *Binocular Vision and Stereopsis* and to *Seeing in Depth* both by Ian P Howard and Brian J Rogers This work is much broader in scope than the previous books and includes mechanisms of depth perception by all senses including aural electrosensory organs and the somatosensory system Volume 1 reviews sensory coding psychophysical and analytic procedures and basic visual mechanisms Volume 2 reviews stereoscopic vision Volume 3 reviews all mechanisms of depth perception other than stereoscopic vision The three volumes are extensively illustrated and referenced and provide the most detailed review of all aspects of perceiving the three dimensional world Volume 3 addresses all depth perception mechanisms other than stereopsis The book starts with an account of monocular cues to depth including accommodation vergence eye movements perspective interposition shading and motion parallax A chapter on constancies in depth perception such as the ability to perceive the sizes and shapes of objects as they move or rotate in depth is followed by a chapter on the ways in which depth cues interact The next chapter reviews sources of information such as changing disparity image looming and vergence eye

movements used in the perception of objects moving in depth Various pathologies of depth perception including visual neglect stereosanomalies and albinism are reviewed Visual depth perception mechanisms through the animal kingdom are described starting with insects and progressing through crustaceans fish amphibians reptiles birds and mammals The chapter includes a discussion of how stereoscopic vision may have evolved The next chapter describes how visual depth perception is used to guide reaching movements of the hand avoiding obstacles and walking to a distant object The next three chapters review non visual mechanisms of depth perception Auditory mechanisms include auditory localization echolocation in bats and marine mammals and the lateral line system of fish Some fish emit electric discharges and then use electric sense organs to detect distortions of the electric field produced by nearby objects Some beetles and snakes use heat sensitive sense organs to detect sources of heat The volume ends with a discussion of mechanisms used by animals to navigate to a distant site Ants find their way back to the nest by using landmarks and by integrating their walking movements Several animals navigate by the stars or by polarized sunlight It seems that animals in several phyla navigate by detecting the Earth's magnetic field

*Sensation and Perception* Harvey Richard Schiffman, 1982 This book combines sensation and perception with all biological sensory aspects of perception with all biological sensory aspects of perception covered from an evolutionary point of view It raises the key question How do the senses gather and secure information about the outside world This basic question is addressed by explaining how the physical world interacts with and stimulates the senses and in turn how the sense and the nervous system transform integrate and process the stimulation Copyright Libri GmbH All rights reserved

The Moon Illusion Joyce Helena Iavecchia, 1979 In two experiments the apparent size of a simulated horizon moon was measured as a function of the distribution of texture in the natural vistas against which it appeared Size was found to increase as the distance to the dominant textural stimulus to accommodation increased and to decrease as the moon rose above the plane of surface texture In the second experiment the subjects accommodation distances to the various scenes were also measured with a laser optometer and after appropriate transformations the size judgments were found to correlate 89 with the measured accommodation values thereby suggesting that the fabled moon illusion is mediated by the oculomotor adjustments of visual accommodation Author Perception, 2003

Moon Illusion: Bestsellers in 2023 The year 2023 has witnessed a remarkable surge in literary brilliance, with numerous engrossing novels enthralling the hearts of readers worldwide. Lets delve into the realm of popular books, exploring the captivating narratives that have charmed audiences this year. Moon Illusion : Colleen Hoovers "It Ends with Us" This touching tale of love, loss, and resilience has captivated readers with its raw and emotional exploration of domestic abuse. Hoover skillfully weaves a story of hope and healing, reminding us that even in the darkest of times, the human spirit can prevail. Uncover the Best : Taylor Jenkins Reids "The Seven Husbands of Evelyn Hugo" This captivating historical fiction novel unravels the life of Evelyn Hugo, a Hollywood icon who defies expectations and societal norms to pursue her dreams. Reids compelling storytelling and compelling characters transport readers to a bygone era, immersing them in a world of glamour, ambition, and self-discovery. Moon Illusion : Delia Owens "Where the Crawdads Sing" This captivating coming-of-age story follows Kya Clark, a young woman who grows up alone in the marshes of North Carolina. Owens spins a tale of resilience, survival, and the transformative power of nature, captivating readers with its evocative prose and mesmerizing setting. These popular novels represent just a fraction of the literary treasures that have emerged in 2023. Whether you seek tales of romance, adventure, or personal growth, the world of literature offers an abundance of compelling stories waiting to be discovered. The novel begins with Richard Papen, a bright but troubled young man, arriving at Hampden College. Richard is immediately drawn to the group of students who call themselves the Classics Club. The club is led by Henry Winter, a brilliant and charismatic young man. Henry is obsessed with Greek mythology and philosophy, and he quickly draws Richard into his world. The other members of the Classics Club are equally as fascinating. Bunny Corcoran is a wealthy and spoiled young man who is always looking for a good time. Charles Tavis is a quiet and reserved young man who is deeply in love with Henry. Camilla Macaulay is a beautiful and intelligent young woman who is drawn to the power and danger of the Classics Club. The students are all deeply in love with Morrow, and they are willing to do anything to please him. Morrow is a complex and mysterious figure, and he seems to be manipulating the students for his own purposes. As the students become more involved with Morrow, they begin to commit increasingly dangerous acts. The Secret History is a brilliant and gripping novel that will keep you speculating until the very end. The novel is a warning tale about the dangers of obsession and the power of evil.
