**More Memories of Warrington** True North Holdings,1998-12-01    Memories of Warrington True North Holdings,1998-12-01    **The Processing of Memories (PLE: Memory)** Norman E. Spear,2014-05-09 Originally published in 1978 this volume contains the evidence that is most crucial for our understanding the processes of forgetting and retention Organized in terms of problem areas and issues that are particularly pertinent to understanding these processes the book deals with both animal and human studies The author begins by defining the topic and reviewing its historical development A theoretical orientation follows and then the author begins to address the major factors that determine what is and what is not remembered Although we cannot yet specify the principles from which we can predict when an episode once learned will be remembered well or forgotten entirely the author demonstrates that such principles are not that far away He considers the issues that must be resolved before such principles are established and in the course of doing so covers the major research on why we remember events and why they are forgotten    *The Works of William Makepeace Thackeray* William Makepeace Thackeray,1879    **The Works of Thackeray** Thackeray,1876    *The Complete Works of William Makepeace Thackeray: The Virginians* William Makepeace Thackeray,1889    The Virginians William Makepeace Thackeray,1878    **Semantic Knowledge and Semantic Representations** Rosaleen A. McCarthy,1995 What is the basis of our ability to assign meanings to words or to objects Such questions have until recently been regarded as lying within the province of philosophy and linguistics rather than psychology However recent advances in psychology and neuropsychology have led to the development of a scientific approach to analysing the cognitive bases of semantic knowledge and semantic representations Indeed theory and data on the organisation and structure of semantic knowledge have now become central and hotly debated topics in contemporary psychology This special issue of Memory brings together a series of papers from established laboratories that are at the forefront of semantic memory research The collection includes papers presenting theoretical overviews of the field as well as papers containing new experimental findings A variety of approaches to the problems of analysing semantic knowledge and semantic representations are included in this volume For example experimental studies of normal subjects are included together with neuropsychological investigations of patients with impaired semantic memory and computational models of the representation of knowledge in normality and disease This collection will therefore be essential reading for researchers and others who are interested in memory function It will also be of interest to cognitive scientists linguists philosophers and others who have puzzled over the many complex and central questions that probe the roots of our ability to understand meaning    **Human Memory and Amnesia (PLE: Memory)** Laird S. Cermak,2014-05-09 Originally published in 1982 this book brings together two areas of research previously studied in parallel with little interaction particularly in the US normal memory processing and the amnesic syndrome When trying to document the relationship between the two it became apparent that there was much crossover and duplication of effort in a

number of areas whether long term memory and short term memory truly represent independent storage systems or are simply points on a continuum trying to determine the primary locus of variables influencing the rate at which information is lost during retention whether episodic memory and semantic memory represent two different storage systems or are simply artifacts produced by different kinds of query to a single memory system and finally whether visual and verbal memory are independent It was written following a meeting in 1979 by a small group of investigators brought together to explore this commonality and to share data and theory thus beginning the promise of a bright future of interdisciplinary interaction in memory research
