Doppelgangers, Alter Egos and Mirror Images in Western Art, 1840-2010 Mary D. Edwards, 2020-06-15 The notion of a person or even an object having a double has been explored in the visual arts for ages and in myriad ways portraying the body and its soul a woman gazing at her reflection in a pool or a man overwhelmed by his own shadow In this edited collection focusing on nineteenth and twentieth century western art scholars analyze doppelgangers alter egos mirror images double portraits and other pairings human and otherwise appearing in a large variety of artistic media Artists whose works are discussed at length include Richard Dadd Salvador Dali Egon Schiele Frida Kahlo the creators of Superman and Nicola Costantino among many others

The Psychology of Left and Right Michael C. Corballis, Ivan L. Beale, 2020-09-10 Originally published in 1976 this title deals with the problem of how we tell left from right The authors argue that the ability to tell left from right depends ultimately on a bodily asymmetry such as preference for one or the other hand or dominance of one side of the brain This has implications for child development reading disability navigation art and culture

The Impact of Learning to Read on Visual Processing Tânia Fernandes, Regine Kolinsky, 2016-01-26 Reading is at the interface between the vision and spoken language domains An emergent bulk of research indicates that learning to read strongly impacts on non linguistic visual object processing both at the behavioral level e g on mirror image processing enantiomorphy and at the brain level e g inducing top down effects as well as neural competition effects Yet many questions regarding the exact nature locus and consequences of these effects remain hitherto unanswered The current Special Topic aims at contributing to the understanding of how such a cultural activity as reading might modulate visual processing by providing a landmark forum in which researchers define the state of the art and future directions on this issue We thus welcome reviews of current work original research and opinion articles that focus on the impact of literacy on the cognitive and or brain visual processes In addition to studies directly focusing on this topic we will consider as highly relevant evidence on reading and visual processes in typical and atypical development including in adult people differing in schooling and literacy as well as in neuropsychological cases e g developmental dyslexia We also encourage researchers on nonhuman primate visual processing to consider the potential contribution of their studies to this Special Topic

On Coexistence Patterns Sindre W. Haugland, 2023-02-20 This book is about coexistence patterns in ensembles of globally coupled nonlinear oscillators Coexistence patterns in this respect are states of a dynamical system in which the dynamics in some parts of the system differ significantly from those in other parts even though there is no underlying structural difference between the different parts In other words these asymmetric patterns emerge in a self organized manner As our main model we use ensembles of various numbers of Stuart Landau oscillators all with the same natural frequency and all coupled equally strongly to each other Employing computer simulations bifurcation analysis and symmetry considerations we uncover the mechanism behind a wide range of complex
