Handbook of Environmentally Conscious Manufacturing Christian N. Madu, 2022-08-19 Manufacturers under pressure from their major stakeholders integrate environmental issues in the design and management of their products. These stakeholders include customers, regulators, employees, communities, and interest groups who have a common stake in protecting the earth from pollution and in limiting the exploitation of earth's limited natural resources. Manufacturers recognize that being environmentally responsible also offers competitive advantage to the firm. The Handbook of Environmentally Conscious Manufacturing is written as a state-of-the-art reference to guide environmentally conscious manufacturing (ECM). All the contributors have done extensive research and/or practice work in the field of ECM. The Handbook covers all the major topics in Environmentally Conscious Manufacturing. There are specific chapters to deal with sustainable manufacturing, recycling, eco labelling, life cycle assessment, and ISO 14000 series of standards, as well as decision-making aspects of Environmentally Conscious Manufacturing. Decision-oriented topics on supply chain, decision models, quality initiative, environmental costing, and decision support systems are also covered. The influence of ECM on marketing imperative is also covered.

Modern Mass Spectrometry Christoph A. Schalley, 2003-07-03 Mass spectrometers are used by almost all chemists and many researchers from neighboring disciplines such as physics, medicine, or biology as a powerful analytical tool. Its advantages are high sensitivity, speed, and almost no sample consumption. During the last two decades, mass spectrometry experienced a boom of new developments pushing its limits further and further at an increasing speed, just similar to the progress in NMR spectroscopy in the 1970s. However, a mass spectrometer does not only serve as a machine for solving complicated analytical problems; it evolved meanwhile to a complete laboratory for the investigation of molecules, clusters, and other species under the environment-free conditions of the highly diluted gas phase. These special conditions, existing only in high vacuum, change the properties of the particles under study significantly with respect to their energetics and reaction pathways. For example, temperature is a macroscopic property of a large ensemble of particles in thermal equilibrium and is thus not defined for a single ion. This fact has severe implications for the measurement of kinetic and thermodynamic data of gas phase species. On the other hand, the examination of gas phase properties has the advantage that systems reduced to minimum complexity can be studied more easily without the complicated influences of solvents or counterions. In particular, the combination of isotopic labeling and mass spectrometry allows for a detailed analysis of reaction mechanisms or conformational analysis through H/D exchange experiments, not only on biomolecules.

Radiation Technologies and Applications in Materials Science Subhendu Ray Chowdhury, 2022-12-30 This book explains various kinds of non-ionizing and high-energy radiations, their interaction with materials, and chemical reactions and conditions of various kinds of materials development technologies, including applications. It covers a processing-structure-property relationship and radiations used in developing many advanced materials used in various fields. It highlights application-oriented materials.
