Ozone And Plant Cell:

Ozone and Plant Cell Victoria V Roshchina, Valentina D. Roshchina, 2013-06-29 Ozone is a normal constituent of air but this gas becomes dangerous for living organism when its concentration in the troposphere is too high Most previous studies of this substance examined it merely in its role as an earth screen for the biosphere or an air pollutant This book will also view its derivatives active oxygen species at a molecular and cellular level as substances that have both positive and negative effects on plant life Plant cells will be considered as both recipients and sources of ozone as well as possible biosensors and bioindicators for low and high concentrations of the compound

Genetic Manipulation in Plants for Mitigation of Climate Change Pawan Kumar Jaiwal, Rana Pratap Singh, Om Parkash Dhankher, 2016-01-07 This book presents a detailed overview and critical evaluation of the state of the art and latest approaches in genetic manipulation studies on plants to mitigate the impact of climate change on growth and productivity Each chapter has been written by experts in plant stress biology and highlights the involvement of a variety of genes pathways and their regulation in abiotic stress recent advances in molecular breeding identification of tightly linked markers QTLs genes transgenesis introduction of exogenous genes or changing the expression of endogenous stress responsive genes and genomics approaches that have made it easier to identify and isolate several key genes involved in abiotic stress such as drought water lodging flooding extreme temperatures salinity and heavy metal toxicity Food and nutritional security has emerged as a major global challenge due to expanding populations and cultivated areas becoming less productive as a result of extreme climatic changes adversely affecting the quantity and quality of plants Hence there is an urgent need to develop crop varieties resilient to abiotic stress to ensure food security and combat increased input costs low yields and the marginalization of land The role of GM crops in poverty alleviation nutrition and health in developing countries and their feasibility in times of climate change are also discussed Recent advances in gene technologies have shown the potential for faster more targeted crop improvements by transferring genes across the sexual barriers The book is a valuable resource for scientists researchers students planners and industrialists working in the area of biotechnology plant agriculture agronomy horticulture plant physiology molecular biology plant sciences and environmental sciences

Ozone Effects on Plant Cell Permeability John Thomas Perchorowicz, 1973 **Approaches for Enhancing Abiotic Stress Tolerance in Plants** Mirza Hasanuzzaman, Kamrun Nahar, Masayuki Fujita, Hirosuke Oku, Tofazzal Islam, 2019-01-10 Plants are frequently exposed to unfavorable and adverse environmental conditions known as abiotic stressors These factors can include salinity drought heat cold flooding heavy metals and UV radiation which pose serious threats to the sustainability of crop yields Since abiotic stresses are major constraints for crop production finding the approaches to enhance stress tolerance is crucial to increase crop production and increase food security This book discusses approaches to enhance abiotic stress tolerance in crop plants on a global scale Plants scientists and breeders will learn how to further mitigate plant responses and develop new crop varieties for the changing climate **Programmed Cell Death in**

Higher Plants E. Lam, H. Fukuda, J. Greenberg, 2011-06-27 The molecular mechanisms which determine whether the cells of a multicellular organism will live or commit suicide have become a popular field of research in biology during the last decade Cell death research in the plant field has also been expanding rapidly in the past 5 years This special volume of Plant Molecular Biology seeks to bring together examples of a diverse array of experimental approaches in a single volume From the differentiation of tracheary elements in vascular plants to the more specialized cell death model of the aleurone in cereals this volume will bring the reader up to date with the characterization of different plant model systems that are currently being studied This endeavor should complement general overviews of plant cell death mechanisms that have been published elsewhere by providing more detailed information on various aspects of this field to interested graduate students and more senior biologists alike
