P Adic L Functions Of P Adic Representations:

\$p\$-adic \$L\$-Functions and \$p\$-adic Representations Bernadette Perrin-Riou,2000 Traditionally p adic L functions have been constructed from complex L functions via special values and Iwasawa theory In this volume Perrin Riou presents a theory of p adic L functions coming directly from p adic Galois representations or more generally from motives This theory encompasses in particular a construction of the module of p adic L functions via the arithmetic theory and a conjectural definition of the p adic L function via its special values Since the original publication of this book in French see Ast risque 229 1995 the field has undergone significant progress These advances are noted in this English edition Also some minor improvements have been made to the text **L-Functions and Arithmetic** J. Coates,Martin J. Taylor,1991-02-22 Aimed at presenting nontechnical explanations all the essays in this collection of papers from the 1989 LMS Durham Symposium on L functions are the contributions of renowned algebraic number theory specialists

The Eigenbook Joël Bellaïche,2021-08-11 This book discusses the p adic modular forms the eigencurve that parameterize them and the p adic L functions one can associate to them These theories and their generalizations to automorphic forms for group of higher ranks are of fundamental importance in number theory For graduate students and newcomers to this field the book provides a solid introduction to this highly active area of research For experts it will offer the convenience of collecting into one place foundational definitions and theorems with complete and self contained proofs Written in an engaging and educational style the book also includes exercises and provides their solution **Motives** ,1994-02-28 Motives were introduced in the mid 1960s by Grothendieck to explain the analogies among the various cohomology theories for algebraic varieties to play the role of the missing rational cohomology and to provide a blueprint for proving Weil's conjectures about the zeta function of a variety over a finite field Over the last ten years or so researchers in various areas Hodge theory algebraic K theory polylogarithms automorphic forms L functions ell adic representations trigonometric sums and algebraic cycles have discovered that an enlarged and in part conjectural theory of mixed motives indicates and explains phenomena appearing in each area Thus the theory holds the potential of enriching and unifying these areas This is one of two volumes containing the revised texts of nearly all the lectures presented at the AMS IMS SIAM Joint Summer Research Conference on Motives held in Seattle in 1991 A number of related works are also included making for a total of forty seven papers from general introductions to specialized surveys to research papers **Iwasawa Theory and Its Perspective, Volume 3** Tadashi Ochiai,2025-06-13 Iwasawa theory began in the late 1950s with a series of papers by Kenkichi Iwasawa on ideal class groups in the cyclotomic tower of number fields and their relation to p adic L functions The theory was later generalized by putting it in the context of elliptic curves and modular forms The main motivation for writing this book was the need for a total perspective of Iwasawa theory that includes the new trends of generalized Iwasawa theory Another motivation is to update the classical theory for class groups taking into account the changed point of view on Iwasawa theory The goal of this third

part of the three part publication is to present additional aspects of the Iwasawa theory of p adic Galois deformations

Algebraic K -Theory Grzegorz Banaszak, 1996 This book contains proceedings of the research conference on algebraic K theory which took place in Poznan Poland in September 1995. The conference concluded the activity of the algebraic K theory seminar held at the Adam Mickiewicz University in the academic year 1994/1995. Talks at the conference covered a wide range of current research activities in algebraic K theory. In particular the following topics were covered: K theory of fields and rings of integers, K theory of elliptic and modular curves, Theory of motives, motivic cohomology, Beilinson conjectures, algebraic K theory of topological spaces, topological Hochschild homology and cyclic homology. With contributions by leading experts in the field this book provides a look at the state of current research in algebraic K theory.

Iwasawa Theory and Its Perspective, Volume 2 Tadashi Ochiai, 2024-04-25 Iwasawa theory began in the late 1950s with a series of papers by Kenkichi Iwasawa on ideal class groups in the cyclotomic tower of number fields and their relation to p adic L functions. The theory was later generalized by putting it in the context of elliptic curves and modular forms. The main motivation for writing this book was the need for a total perspective of Iwasawa theory that includes the new trends of generalized Iwasawa theory. Another motivation is to update the classical theory for class groups taking into account the changed point of view on Iwasawa theory. The goal of this second part of the three part publication is to explain various aspects of the cyclotomic Iwasawa theory of p adic Galois representations.

Motives Uwe Jannsen, Jean-pierre Serre, Steven Kleiman, 1994-02-28 Motives were introduced in the mid 1960s by Grothendieck to explain the analogies among the various cohomology theories for algebraic varieties to play the role of the missing rational cohomology and to provide a blueprint for proving Weil's conjectures about the zeta function of a variety over a finite field. Over the last ten years or so researchers in various areas Hodge theory, algebraic K theory, polylogarithms, automorphic forms, L functions, ell adic representations, trigonometric sums and algebraic cycles have discovered that an enlarged and in part conjectural theory of mixed motives indicates and explains phenomena appearing in each area. Thus the theory holds the potential of enriching and unifying these areas. These two volumes contain the revised texts of nearly all the lectures presented at the AMS/IMS/SIAM Joint Summer Research Conference on Motives held in Seattle in 1991. A number of related works are also included, making for a total of forty seven papers from general introductions to specialized surveys to research papers.

This is the third such set of volumes in number theory. The first was edited by W.J. LeVeque and included reviews from 1940-1972. The second was edited by R.K. Guy and appeared in 1984.

An

Algebraic P-adic L-function for Ordinary Families Jyoti Prakash Saha,2014 In this thesis we construct algebraic p adic L functions for families of Galois representations attached to p adic analytic families of automorphic representations using the formalism of Selmer complexes This is achieved mainly through making a modification of the Selmer complex to ensure that we deal with perfect complexes and proving a control theorem for the local Euler factors at places not lying above p The control theorem for local Euler factors is obtained by studying the variation of monodromy under pure specializations of p adic families of Galois representations restricted to decomposition groups at places of residue characteristic different from p This allows us to prove a control theorem for the algebraic p adic L functions that we construct for Hida families of ordinary cusp forms and ordinary automorphic representations for definite unitary groups For the Hida family of ordinary cusp forms we construct a two variable algebraic p adic L function and formulate a conjecture relating it with the analytic p adic L function constructed by Emerton Pollack and Weston Using results due to Kato Skinner and Urban we prove this conjecture in some special cases **Number Theory** Shigeru Kanemitsu,J.-Y.
