Measuring Racial Discrimination:

Measuring Racial Discrimination National Research Council, Division of Behavioral and Social Sciences and Education, Committee on National Statistics, Panel on Methods for Assessing Discrimination, 2004-06-24 Many racial and ethnic groups in the United States including blacks Hispanics Asians American Indians and others have historically faced severe discrimination pervasive and open denial of civil social political educational and economic opportunities Today large differences among racial and ethnic groups continue to exist in employment income and wealth housing education criminal justice health and other areas While many factors may contribute to such differences their size and extent suggest that various forms of discriminatory treatment persist in U S society and serve to undercut the achievement of equal opportunity Measuring Racial Discrimination considers the definition of race and racial discrimination reviews the existing techniques used to measure racial discrimination and identifies new tools and areas for future research The book conducts a thorough evaluation of current methodologies for a wide range of circumstances in which racial discrimination may occur and makes recommendations on how to better assess the presence and effects of discrimination Measuring Racial Discrimination in American Housing Markets United States. Department of Housing and Urban Development. Office of Policy Development and Research. Division of Evaluation, 1979 Measuring Racial Discrimination , 2004 **Measuring Racial Discrimination in Bail Decisions** David Arnold, Will S. Dobbie, Peter Hull, 2020 We develop new quasi experimental tools to measure racial discrimination in the context of bail decisions Observational comparisons of white and black pretrial release rates suffer from omitted variables bias when there are unobserved racial differences in pretrial misconduct potential We show that the bias in these observational comparisons is a function of average white and black misconduct risk which can be estimated from the quasi random assignment of bail judges Estimates from New York City show that less than one third of the release rate disparity between white and black defendants is explained by unobserved differences in misconduct potential with more than two thirds explained by racial discrimination We then develop a hierarchical marginal treatment effects model that imposes additional structure on the quasi experimental variation to investigate the drivers of this discrimination Model estimates show that discrimination in bail decisions is driven by both racial bias and statistical discrimination with the latter coming from a higher level of average risk and less precise risk signals for black defendants **Measuring Racial Discrimination in Algorithms** David Arnold, Will S. Dobbie, Peter Hull, 2020 There is growing concern that the rise of algorithmic decision making can lead to discrimination against legally protected groups but measuring such algorithmic discrimination is often hampered by a fundamental selection challenge We develop new quasi experimental tools to overcome this challenge and measure algorithmic discrimination in the setting of pretrial bail decisions We first show that the selection challenge reduces to the challenge of measuring four moments the mean latent qualification of white and Black individuals and the race specific covariance between qualification and the algorithm s treatment recommendation We then show how these four moments can

be estimated by extrapolating quasi experimental variation across as good as randomly assigned decision makers Estimates from New York City show that a sophisticated machine learning algorithm discriminates against Black defendants even though defendant race and ethnicity are not included in the training data The algorithm recommends releasing white defendants before trial at an 8 percentage point 11 percent higher rate than Black defendants with identical potential for pretrial misconduct with this unwarranted disparity explaining 77 percent of the observed racial disparity in algorithmic recommendations We find a similar level of algorithmic discrimination with regression based recommendations using a model inspired by a widely used pretrial risk assessment tool Measuring Racial Discrimination Panel on Methods for Assessing Discrimination, Committee on National Statistics, Division of Behavioral and Social Sciences and Education, National Research Council, 2004-06-28 Many racial and ethnic groups in the United States including blacks Hispanics Asians American Indians and others have historically faced severe discrimination pervasive and open denial of civil social political educational and economic opportunities Today large differences among racial and ethnic groups continue to exist in employment income and wealth housing education criminal justice health and other areas While many factors may contribute to such differences their size and extent suggest that various forms of discriminatory treatment persist in U S society and serve to undercut the achievement of equal opportunity Measuring Racial Discrimination considers the definition of race and racial discrimination reviews the existing techniques used to measure racial discrimination and identifies new tools and areas for future research The book conducts a thorough evaluation of current methodologies for a wide range of circumstances in which racial discrimination may occur and makes recommendations on how to better assess the presence and effects of discrimination
