Mechanics problems in geodynamics. 1 (1995) Ren Wang, Keiiti Aki, 1995 Geodynamics concerns with the dynamics of the global motion of the earth of the motion in the earth's interior and its interaction with surface features together with the mechanical processes in the deformation and rupture of geological structures Its final object is to determine the driving mechanism of these motions which is highly interdisciplinary In preparing the basic geological geophysical data required for a comprehensive mechanical analysis there are also many mechanical problems involved which means the problem is coupled in a complicated manner with geophysics rock mechanics seismology structural geology etc This topical issue is Part I of the Proceedings of an IUTAM IASPEI Symposium on Mechanics Problems in Geodynamics held in Beijing September 1994 It addresses different aspects of mechanics problems in geodynamics involving tectonic analyses lithospheric structures rheology and the fracture of earth media mantle flow either globally or regionally and either by forward or inverse analyses or numerical simulation

Induced Seismic Events Peter Knoll, Georg Kowalle, 2012-12-06 Induced seismic events are of high scientific and economic significance They are the result of human activities interacting with regional and local tectonics changing the local crustal stress state by mining extraction of rock masses injection of fluids into the rock massif and by changing the surface loading and pore pressure state near large reservoirs Within Europe the study of induced seismic events has a long tradition and international scientific organizations have actively stimulated the co operation in this field During its General Assembly in September 1994 the European Seismological Society organized the symposium Induced Seismic Events The focus of this symposium was concentrated on induced events in central and eastern Europe as well as in the former Soviet Union The major contributions to the symposium and also some Chinese Canadian and South African results are presented here Case studies as well as data analyses and methodological studies are included Seismologists and specialists working in the field of geohazard prevention will find much information in this volume that is pertinent to their work

Geodynamics of Lithosphere & Earth's Mantle

Jaroslava Plomerová, Robert C. Liebermann, Vladislav Babuška, 2012-12-06 Plate tectonics has significantly broadened our view of the dynamics of continental evolution involving both the processes currently active at the surface and those extending deep into the interior of the Earth. Seismic anisotropy provides some of the most diagnostic evidence for mapping past and present deformation of the entire crust-mantle system. This volume contains papers presented originally at an international workshop at the Chateau of Trest in the Czech Republic in 1996. This workshop brought together geophysicists and geologists who work in the field of observational and theoretical seismology, mineral and rock physics, gravity studies and geodynamic modelling. Topics include large scale anisotropy of the Earth's mantle, mantle heterogeneity vs anisotropy, 3-D velocity and density structures and inferences on mantle dynamics, mineral and rock physics studies and mathematical aspects of complex wave propagation.

Enhanced Geothermal Systems (EGS) Dornadula Chandrasekharam, Alper Baba, 2023-10-02 Peter Meisen. Past President Global Energy Network Institute asked in 1997: What if there was an existing viable technology that when developed to its highest potential could increase everyone's standard of living, cut fossil fuel demand and the resultant pollution? After 23 years of sustained effort by the global scientific community, this is becoming a reality. The technology to extract heat from granite has been revolutionized in the last few years. The classical method of creating fracture networks by hydrofracturing is being replaced by a closed loop method where fluids are not in contact with the hot granite. Supercritical CO₂ is replacing water as a circulating fluid. Certainly the future energy road is going to be led by highly radiogenic granites. While hydrothermal sources are site specific and have their limitations, EGS can be initiated anywhere on earth. EGS is removing all such obstacles and in the future will provide uninterrupted electricity for all. Energy deficient countries can have surplus electricity, water stressed countries can have a perennial freshwater supply and countries can become food secure and rise above poverty levels. Countries need not depend on energy imports and can independently evolve into carbon neutral or low carbon societies. The contributions made by experts will help researchers and investors to close the energy demand and supply gap in the very near future by tapping the unlimited energy of the Earth. Opportunities available for investors in Turkey are well documented with field geophysical and geochemical data and information on the energy generating capacity of the granite intrusive spread over a cumulative area of 6 910 km² in western Anatolia. With the signing of the Global Geothermal Alliance GGA by several countries during the December 2015 CoP 21 Conference of Parties summit in Paris, countries are obliged to reduce CO₂ emissions by increasing the footprint of renewable energy in the primary source mix. Information provided in this book will lead the way to establishing a clean energy future for millions of people for sustainable development and help to mitigate crises arising due to food, water and energy shortage issues. Academic and research institutes will benefit to a large extent from the expertise of the top contributors in this book. This information provided in
