*Measurement and Manipulation of Intracellular Ions* ,1995-10-10 This practical book provides the detailed methodology and expert guidance required for measuring and manipulating cytosolic ion concentrations In addition the strengths weaknesses and pitfalls of various techniques are presented It is an invaluable source for those needing an objective evaluation of current methodologies and for those contemplating setting up such procedures A one source reference for measuring and manipulating intracellular ions and for comparing and evaluating current methodologies Includes overviews of Optical probes and reagents Fabrication and use of ion selective microelectrodes Use of NMR spectroscopy Ionophores

*Methods in Neurosciences: Measurement and manipulation of intracellular ions* P. Michael Conn,1989 Gramicidin and Related Ion Channel-Forming Peptides Derek J. Chadwick,Gail Cardew,2008-04-30 Gramicidin channels have been studied intensively for more than 25 years They serve as model transport systems for large protein ion channels since it is difficult to glean high resolution structural information on the latter This book includes contributions from virtually all the major scientists studying gramicidin channels and is the only compilation of work in this field It discusses crystallographic spectroscopic electrophysiological and computational studies especially in the light of the recent availability of high resolution structural data and it compares these with insights derived from larger systems As well as drawing together much new and exciting work in this field it provides pointers to promising new research directions **Methods in**

Fish Osmoregulation Bernardo Baldi, J.M. Mancera, Romero, B.G. Kapoor, 2019-05-20 Fish lives in environments with a wide variety of chemical characteristics: fresh, brackish, and seawater; acidic, alkaline, soft, and hard waters. From an osmoregulatory point of view, fish have developed several mechanisms to live in these different environments. Fish osmoregulation has always attracted considerable attention and, in the last years, several studies have increased our knowledge of this physiological process. In this book, several specialists have analyzed and reviewed the new data published regarding fish osmoregulation. The chapters present an integrative synthesis of the different aspects of this field, focusing on osmoregulation in specific environments or situations, function of osmoregulatory organs, general mechanisms, and endocrine control. In addition, interactions of osmoregulatory mechanisms with the immune system, diet, and metabolism were also reviewed. New emerging techniques to study osmoregulation have also been analyzed.
