Mechanic Muse:

The Mechanic Muse Hugh Kenner, 1987 Hugh Kenner one of America's most distinguished critics brings his customary wit and erudition to bear on a particularly provocative theme the response of literary Modernism to a changing environment wrought by technology In fascinating examinations of Eliot Pound Joyce and Beckett Kenner looks at how inventions like the linotype the typewriter the subway and the computer altered the way the world was viewed and depicted Kenner sheds new light on the works of these authors while providing almost incidentally a wealth of anecdotes and asides that will delight the general reader and literary specialist alike

The Future Without a Past John Paul Russo, 2005 Argues that technological imperatives like rationalization universalism monism and autonomy have transformed the humanities and altered the relation between humans and nature Examines technology and its impact on education historical memory and technological and literary values in criticism and theory concluding with an analysis of the fiction of Don DeLillo Provided by publisher

Programming Literature Rebecca Roach, 2025-12-18 This is a book about the messy archival worlds of literature and computing and the myriad of relations that have existed between the two Before J M Coetzee was a writer of Nobel Prize winning novels the South African was a programmer for one of the most significant Cold War supercomputer projects in Britain Experimental British writer Christine Brooke Rose worked at Bletchley Park with Alan Turing When not opining about modernism Canadian literary critic Hugh Kenner was a devoted computer hobbyist Literary scholars have often not known what to make of these other careers intimidating irrelevant outside of the scope of literary studies surely When they do make links it is often via the frame of formal logic that has dominated discussions of both computer history and literary modernism This book starts from a different assumption that far from irrelevant these material experiences were significant in the development of the literary projects of writers including Coetzee Brooke Rose Kenner William Gaddis and Kamau Brathwaite It contends that it is in the practice and the archive rather than on the plane of abstraction that we can best see this influence Addressing literary scholars media and computer historians and digital theorists alike *Programming Literature* productively reframes contemporary debates around artificial intelligence the value of the humanities and tech culture by emphasizing just how material these worlds have always been

Control Seb Franklin, 2024-07-02 An examination of digitality not simply as a technical substrate but also as the logical basis for reshaped concepts of labor subjectivity and collectivity Is there a cultural logic of what we have come to call the information age Have the technologies and techniques centered on the computer provided not only tools but also the metaphors through which we now understand the social and economic formation of our world In *Control* Seb Franklin addresses the conditions of knowledge that make the concept of the information economy possible while at the same time obscuring its deleterious effects on material social spaces In so doing Franklin traces three intertwined threads the relationships among information labor and social management that emerged in the nineteenth century the mid twentieth century diffusion of computational metaphors and the appearance of informatic

principles in certain contemporary socioeconomic and cultural practices Drawing on critical theory media theory and the history of science Franklin names control as the episteme grounding late capitalism Beyond any specific device or set of technically mediated practices digitality functions within this episteme as the logical basis for reshaped concepts of labor subjectivity and collectivity as well as for the intensification of older modes of exclusion and dispossession In tracking the pervasiveness of this logical mode into the present Franklin locates the cultural traces of control across a diverse body of objects and practices from cybernetics to economic theory and management styles and from concepts of language and subjectivity to literary texts films and video games

T. S. Eliot and the Dynamic Imagination Sarah Kennedy, 2018-04-05

How is a poem made From what constellation of inner and outer worlds does it issue forth Sarah Kennedy's study of Eliot's poetics seeks out those images most striking in their resonance and recurrence the sea change the light invisible and the dark ghost She makes the case for these sustained metaphors as constitutive of the poet's imagination and art Eliot was haunted by recurrence His work is full of moments of luminous recognitions moments in which a writer discovers both subject and appropriate image This book examines such moments of recognition and invocation by reference to three clusters of imagery drawing on the contemporary languages of literary criticism psychology physics and anthropology Eliot's transposition of these registers at turns wary and beguiled interweaves modern understandings of originary processes in the human and natural world with a poet's preoccupation with language The metaphors arising from these intersections generate the imaginative logic of Eliot's poetry

Modernist Invention Edward Allen, 2020-07-23

Modernist Invention attends to the parallel histories of media technology and modernist American poetry
