Conkling, 2004 Marginal Cost in the New Economy outlines a bold new approach for resolving a wide variety of public policy debates. It proposes that a single standard marginal cost methodology be adopted to replace the haphazard arrays of methods and techniques currently employed to measure the costs and benefits of disputed policy issues. The book's objective is to substitute a single set of harmonious principles for the inconsistent, erratic and often self-serving approaches to cost-benefit determination currently applied to numerous public issues. The author explains how this methodology would provide an effective starting point for evaluating issues ranging from the relatively simple such as school vouchers to the more complex including prescription drug prices and anti-trust questions. The book also includes a review of the economic requirements of the New Economy as contrasted with traditional microeconomics, which makes it
