Marijuana Loren L. Miller, 2013-10-22 *Marijuana Effects on Human Behavior* attempts to synthesize much of the existing experimentation concerning the acute and chronic effects of marijuana and its derivatives on human behavior. The book opens with a chapter on the strategies for conducting research on marijuana. It also describes a clinical study at the University of British Columbia. The next chapter discusses the issues that have beclouded the question of legalization of marijuana in the United States. This is followed by separate chapters on the effects of marijuana on motor and mental performance, marijuana memory research, a model of attention which can be used to describe the effects of marijuana use on cognition, and the effects of marijuana on neuropsychological functioning and learning. Subsequent chapters examine the behavioral actions of cannabis in man, compare the behavioral actions of cannabinoids in humans with those found in infrahumans, with special reference to acquisition and retention processes, timing behavior, state dependent learning, and attention, and investigate the long term effects of cannabis use. *Marijuana; Effects on Human Behavior* Loren L. Petersen,National Institute on Drug Abuse,1977 Marihuana research findings 1976 is the more detailed reference report which provided the basis for the shorter sixth edition of the Marihuana and Health Report While the latter was intended for a general audience this more detailed review of each of the areas discussed is more likely to be of interest to the technically trained reader In order to be of maximum usefulness this monograph also includes as a summary the text of the sixth report This volume is provided as part of the Research Monograph series to ensure that the briefer reports are available to those with particular need for still more specialized materials Page 1 **The Criminal Personality** Samuel Yochelson,Stanton Samenow,1976 The third in a series explicating the criminal mind this volume summarizes observations interpretations and conclusions derived from a study of 121 criminal men who used drugs and or alcohol to excess Originally set in writing by Yochelson before his death in 1976 the materials were edited and updated by Samenow for publication Systematic probing and repeated interviews were used as the vehicle for gathering information on common mental themes among men apprehended and sentenced for criminal acts Yochelson and Samenow attribute crime to a series of early irresponsible choices that predate drug use among drug using criminals Personality and personal choice variables are conceptualized as critical in initialing and maintaining use In what is called an

indiscriminate search for excitement drug using criminals are characterized as expanding their criminal repertoire while excusing their actions by rationalizations sometimes invented by sociologists psychologists and psychiatrists Although these ideas are of considerable interest the real value of the text lies in its intriguing presentation of drug user thinking Specifically three chapters are well worth reading The description of mental activities associated with such constructs as the high the nod and the rush are probably on target for many drug users whether criminal or not The chapter explaining drugs as facilitators offers several notions worthy of systematic inquiry as does the one devoted to principles for encouragement of behavior change Of perhaps greatest benefit to most readers are caveats regarding management of drug users in what may be seen as a cognitive behavioral framework Yochelson and Samenow contend that drug using criminal men represent the architects of their criminal life styles and that it is they themselves who can correct irresponsible thoughts and behaviors through application of logic over emotion Contemporary Psychology A Jason Arosen Book     *Handbook of Psychopharmacology* Leslie L.
