Radionuclides in the Study of Marine Processes P.J. Kershaw, D.S. Woodhead, 2012-12-06 The Norwich Symposium Radionuclides in the Study of Marine Processes is a sequel to the very successful conference held at Cherbourg France in June 1987. The international character of the meeting has been maintained with thirty eight contributions from seventeen countries being accepted for oral presentation. For many years the radioactive properties of the naturally occurring radionuclides have been used to determine their distributions in the marine environment and more generally to gain an understanding of the dynamic processes which control their behaviour in attaining these distributions. More recently the inputs from human activities of both natural and artificial i.e. man made radionuclides have provided additional opportunities for the study of marine processes on local, regional and global scales. Because the sources of artificial radionuclides are often reasonably well defined in space and time and because a wider range of elements is represented new viewpoints for the study of processes have become available. Although it is outside the scope of this Symposium it must be acknowledged that the radiological protection requirements for radioactive waste disposal practices to be based on a sound scientific understanding of radionuclide behaviour in the sea have also provided a very strong impetus for the studies.

**Protozoa and Their Role in Marine Processes** P.C. Reid, C.M. Turley, P.H. Burkhill, 2013-06-29 In the summer of 1988 under NATO sponsorship approximately 80 scientists lived and worked together in Plymouth for two weeks to evaluate the ecological role of protozoa in the sea. Through the convivial surroundings, close working conditions and special facilities that had been brought together for NATO ASI 604 87 a melting pot of ideas was formed which stimulated the multidisciplinary creativity which is expressed in this book and in a second series of papers which will be published in Marine Microbial Food Webs under the title Protozoa and their Role in Marine Microbial Food Webs. Discussions of the role of protozoa in the microbial food web in the cycling of carbon and nitrogen and the extent to which this web acts as a link or sink to metazoa in the water column were major themes of the ASI. Structured sessions covering oral and poster presentations, field work, model fitting, laboratory practicals and demonstrations of techniques such as image analysis and flow cytometry formed the core of the meeting. Participants took part enthusiastically in the practical sessions developing new concepts and obtaining new insights into their work. The practicals included a protozoo and some beautiful films and videos. Field excursions were made to a range of sites including a unique marine sewage farm at Looe in Cornwall. Jones this volume. Interactive workshops allowed scientists with no modelling experience to input their results to three simulation models and a flow analysis package.

Modelling Coastal And Marine Processes (2nd Edition) Phil Dyke, 2016-02-05 Modelling is now an accepted part in the understanding, prediction and planning of environmental strategies. Perfect for undergraduate students and non-specialist readers. Modelling Coastal and Marine Processes 2nd Edition offers an introduction into how coastal and marine models are constructed and used. The mathematics, statistics and numerical techniques used are explained in the first few chapters.

making this book accessible to those without a high level maths background Later chapters cover modelling sea bed friction tides shallow sea dynamics and ecosystem dynamics Importantly there is also a chapter on modelling the impact of climate change on coastal and near shore processes New to this revised edition is a chapter on tides tsunamis and the prediction of sea level and additional material on the new application of the numerical techniques flux corrected transport finite volumes and adaptive grids to coastal and marine modelling Modelling Marine Processes P. P. G. Dyke,1996 This work explains the fundamentals and capabilities of modelling processes and demonstrates the theory behind the physics chemistry and biology of the marine environment Intended for students and environmental scientists and engineers and assumes no understanding of advanced mathematics
