## Pacific Rift:

**Rift Activity in the Eastern Pacific** Elfriede Bankwitz, Peter Bankwitz, 1978     *The Earth's Dissipative Structures* Oleg V. Petrov, 2018-12-30 This volume describes physical formal mathematical and exterior morpho structural manifestations of wave dynamics of the Earth defining both its deep structural image and the external shape of planet In addition to the standard imagination about waves in the geological environment as short term seismological and seismic effects wave dynamics of the Earth are considered as long time process comparable to the geochronological scale The book consists of a systematic description of the conformities discovered in the set of heterogeneous and different order objects which have space related regularity and recurrence at the different levels of resolution of analysis of natural systems For expert geologist it includes the basis of the geodynamic wave related concept which enables to add to the traditional concept of plate tectonics as well as the methods of quantitative interpretation of measured geo fields

## **Cartographies of Danger**

Mark Monmonier, 2008-04-15 No place is perfectly safe but some places are more dangerous than others Whether we live on a floodplain or in Tornado Alley near a nuclear facility or in a neighborhood poorly lit at night we all coexist uneasily with natural and man made hazards As Mark Monmonier shows in this entertaining and immensely informative book maps can tell us a lot about where we can anticipate certain hazards but they can also be dangerously misleading California for example takes earthquakes seriously with a comprehensive program of seismic mapping whereas Washington has been comparatively lax about earthquakes in Puget Sound But as the Northridge earthquake in January 1994 demonstrated all too clearly to Californians even reliable seismic hazard maps can deceive anyone who misinterprets known fault lines as the only places vulnerable to earthquakes Important as it is to predict and prepare for catastrophic natural hazards more subtle and persistent phenomena such as pollution and crime also pose serious dangers that we have to cope with on a daily basis Hazard zone maps highlight these more insidious hazards and raise awareness about them among planners local officials and the public With the help of many maps illustrating examples from all corners of the United States Monmonier demonstrates how hazard mapping reflects not just scientific understanding of hazards but also perceptions of risk and how risk can be reduced Whether you live on a faultline or a coastline near a toxic waste dump or an EMF generating power line you ignore this book's plain language advice on geographic hazards and how to avoid them at your own peril

Nunn,1999-06-09 Talk of the human enhanced greenhouse effect and the ways in which it may affect our lives has made  
many people more aware of environmental change We have come to realize that the environment is and has always been in a  
state of continuous change and that we and other organisms have had to adjust our lifestyles accordingly This book focuses  
on the Pacific Basin a vast region which can be considered a microcosm of the entire surface of the Earth and which has  
suffered from being marginalized in most accounts of Earth surface processes and phenomena In this book the Pacific Basin  
includes the Pacific Ocean and Islands and also the Pacific Rim which is divided into the subregions of Antarctica South  
America Central America North America Beringia East Asia and Australasia Professor Nunn begins by outlining the distant  
origins of the modern Pacific Basin more than 1000 million years ago then traces its development through the Palaeozoic and  
Mesozoic into the Cenozoic Era For this time the last 66 million years the history of environmental change becomes  
progressively better known For the last 1 8 million years the Quaternary period the Earth's climate has oscillated between  
warm and cool producing synchronous environmental changes throughout most of the Pacific Basin The importance of  
volcanism and tectonics land level movements for which the Pacific Basin is well known as causes of environmental change is  
explained in detail The effects of human activities on most Pacific Basin environments began to be registered only during the  
Holocene the last 12 000 years culminating in the environmental crisis which currently afflicts many parts of this region  
While the role of humans in altering Pacific Basin environments is discussed in detail considerable attention is also given to  
the ways in which environmental change caused changes to human lifestyles which had far reaching consequences      **Earth**
