Dynamic Secrets in Communication Security Sheng Xiao, Weibo Gong, Don Towsley, 2013-08-13 Dynamic secrets are constantly generated and updated from messages exchanged between two communication users. When dynamic secrets are used as a complement to existing secure communication systems, a stolen key or password can be quickly and automatically reverted to its secret status without disrupting communication. Dynamic Secrets in Communication Security presents unique security properties and application studies for this technology. Password theft and key theft no longer pose serious security threats when parties frequently use dynamic secrets. This book also illustrates that a dynamic secret based security scheme guarantees impersonation attacks are detected even if an adversary steals a user's password or their key is lost. Practitioners and researchers working in network security or wireless communications will find this book a must have reference. Dynamic Secrets in Communication Security is also a valuable secondary text for advanced level students in computer science and electrical engineering.
