Paleodemography Age Distributions From Skeletal Samples:

Paleodemography Robert D. Hoppa, James W. Vaupel, 2008-10-30 Paleodemography is the field of enquiry that attempts to identify demographic parameters from past populations usually skeletal samples derived from archaeological contexts and then to make interpretations regarding the health and well being of those populations. However, paleodemographic theory relies on several assumptions that cannot easily be validated by the researcher and if incorrect can lead to large errors or biases. In this book, physical anthropologists, mathematical demographers, and statisticians tackle these methodological issues for reconstructing demographic structure for skeletal samples. Topics discussed include how skeletal morphology is linked to chronological age assessment of age from the skeleton, demographic models of mortality and their interpretation, and biostatistical approaches to age structure estimation from archaeological samples. This work will be of immense importance to anyone interested in paleodemography, including biological and physical anthropologists, demographers, geographers, evolutionary biologists, and statisticians.

Paleodemography Robert D. Hoppa, James W. Vaupel, 2002 Many methodological and theoretical problems exist in reconstructing demographic structure from archaeological populations. Paleodemography is an innovative volume which tackles these issues to reach a consensus on the way forward. It will be the benchmark for all those interested in skeletal samples and their implications for analysing past populations.

Recent Advances in Ageing and Sexing Animal Bones

Deborah Rusillo,2015-06-30 This volume in the ICAZ series deals with the technical advances made over the last twenty years in the field of ageing and sexing animal bones The analysis of ancient DNA holds great possibilities for sexing certain faunal assemblages though by no means all which is an urgent issue in the study of hunting and animal husbandry It can be assumed that our forebears used more subtle taxonomic criteria than we do today and it is important therefore that we are able to recognise traits that will allow for more accurate classification in terms of calendar age or sex The eighteen papers in this book examine the state of research for various techniques of age sex determination and assess potential future development
