Methodology In The Study Of International:

Methodology in the Study of International Relations Trygve Mathisen, 1959 Methodology in the Study of International Relations Trygve Mathisen, 1974 **Methodology in the Study of International Relations** Trygve Mathisen (historien.), 1959 **Research Methods in International Relations** Christopher Lamont, 2015-04-25 This book guides you through the entirety of the research process in International Relations from selecting a research question and reviewing the literature to field research and writing up. Covering both qualitative and quantitative methods in IR it offers a balanced assessment of the key methodological debates and research methods within the discipline. The book is specifically focussed on research methods used in International Relations. Spans the entire research process from choosing a research question to writing up. Provides practical research methods guidance. Introduces you to broader methodological debates and brings together contemporary research from empirical and interpretive traditions. Is packed with examples and suggestions for further reading. Research Methods in International Relations is essential reading for both undergraduate and postgraduate students taking Research Methods courses in International Relations, Politics, Security and Strategic Studies. *Resources and Applied Methods in International Relations* Guillaume Devin, 2017-10-18 This book constitutes an up to date methodology reference work for International Relations IR scholars and students. The study of IR calls for the use of multiple and various tools to try and describe international phenomena, analyze and understand them, compare them, interpret them, and try to offer theoretical approaches. In a nutshell, doing research in IR requires both tools and methods from the use of archives to the translation of results through mapping, from conducting interviews to analyzing quantitative data, from constituting a corpus to the always touchy interpretation of images and discourses. This volume assembles twenty young researchers and professors in the field of IR and political science to discuss numerous rich and thoroughly explained case studies. Merging traditional political science approaches with methods borrowed from sociology and history, it offers a clear and instructive synthesis of the main resources and applied methods to study International Relations. **Models, Numbers, and Cases** Detlef F. Sprinz, Yael Wolinsky-Nahmias, 2004 Publisher Description **Scientific Approaches to the Study of International Relations** Jan-Henrik Petermann, 2011-11-21 Essay from the year 2006 in the subject Politics General and Theories of International Politics. London School of Economics Department of International Relations. Language: English. abstract Since the behaviourist turn of the 1960s, questions concerning the appropriateness and desirability of a positivist research agenda have been at the forefront of meta-methodological debate within the social sciences. The evolving science wars between positivists and normativists have also presented enormous challenges to the epistemological identities and professional self-images of scholars working in the academic field of International Relations. IR. Whereas positivists maintain that the overarching aim of science is the experimentally guided explanation of empirical phenomena under covering laws, normativists and traditionalists hold that social scientists cannot and in fact should not emulate the causal models of the

natural sciences According to this view it is virtually impossible to study the influences of distinct variables in complex social interactions and statistical aggregation merely obscures the fact that the true causes of events are rarely obvious in the social world Hence the purpose of political and social research ought to be a desire to understand processes from within rather than to explain them from outside Yet the traditionalist critique of social scientific positivism did not imply that positivists would be entirely oblivious to the importance of norms in international life IR does not only deal with descriptive but with political and ultimately prescriptive aspects of the social world Thus it might appear worthwhile to ask how scientific are so called scientific positivist approaches to the study of IR if their theoretical premises and empirical achievements are taken at face value and judged by their own standards of scientific neutrality and precision To answer this question I will first describe the spread of positivist thought in IR Secondly I will outline in how far two research programmes which have been heavily influenced by positivist method game theory and the democratic peace thesis have challenged traditionalist approaches and whether they can be regarded as truly scientific Drawing on these insights I will conclude that on closer inspection positivist research methods in IR do lack a perfectly scientific status although they have made important contributions to the academic field
