Eiselt, C.-L. Sandblom, 2007-08-15 In the pages of this text readers will find nothing less than a unified treatment of linear programming Without sacrificing mathematical rigor the main emphasis of the book is on models and applications The most important classes of problems are surveyed and presented by means of mathematical formulations followed by solution methods and a discussion of a variety of what if scenarios Non simplex based solution methods and newer developments such as interior point methods are covered **Text Book of Linear Programming-II** A.K. Sharma, 2005 Linear Programming has progressed a great deal during last two decades It is becoming increasingly sophisticated with the availability of computer facilities and infusion of new chapters The text of this book has been presented in easy and simple language Throughout the text the two streams theory and technique run side by side Each technique run side by side Each technique is preceded by the relevant theory followed by suitable examples A large number of important problems mostly drawn from university examination papers has been included *Linear-Fractional Programming Theory, Methods, Applications and Software* E.B. Bajalinov, 2003-11-30 This is a book on Linear Fractional Programming here and in what follows we will refer to it as LFP The field of LFP largely developed by Hungarian mathematician B Martos and his associates in the 1960 s is concerned with problems of optimization LFP problems deal with determining the best possible allocation of available resources to meet

certain specifications In particular they may deal with situations where a number of resources such as people materials machines and land are available and are to be combined to yield several products In linear fractional programming the goal is to determine a per missible allocation of resources that will maximize or minimize some specific showing such as profit gained per unit of cost or cost of unit of product produced etc Strictly speaking linear fractional programming is a special case of the broader field of Mathematical Programming LFP deals with that class of mathematical programming problems in which the relations among the variables are linear the con strain relations i e the restrictions must be in linear form and the function to be optimized i e the objective function must be a ratio of two linear functions

Linear Programming in Industry Sven Dano,2013-04-17 The present volume is intended to serve a twofold purpose First it provides a university text of Linear Programming for students of or operations research interested in the theory of production economics and cost and its practical applications secondly it is the author s hope that engineers business executives managers and others responsible for the organization and planning of industrial operations may find the book useful as an introduction to Linear Programming methods and techniques Despite the different backgrounds of these categories of potential readers their respective fields overlap to a considerable extent both are concerned with economic optimization problems and the use of Linear Programming to problems of production planning is simply applied theory of production The non economist reader may but should not pass over Chapter IV in which the linear production model is linked up with the economic theory of production Without being an advanced text the book aims at covering enough ground to make the reader capable of detecting formulating and solving such linear planning problems as he may encounter within his particular field No heavy demands are made on the reader s mathematical profi ciency except for the proofs in the Appendix which may be skipped desired the mathematical exposition is purely elementary involving only simple linear relations In the author s experience the pedagogical advantages of this approach as compared with the use of matrix algebra amply justify the sacrilice of mathematical elegance and typographical simplicity particularly in explaining the simplex method

Introduction to Fuzzy Linear Programming Problems Jagdeep Kaur,Amit Kumar,2016-04-02 The book presents a snapshot of
 the state of the art in the field of fully fuzzy linear programming The main focus is on showing current methods for finding
 the fuzzy optimal solution of fully fuzzy linear programming problems in which all the parameters and decision variables are
 represented by non negative fuzzy numbers It presents new methods developed by the authors as well as existing methods
 developed by others and their application to real world problems including fuzzy transportation problems Moreover it
 compares the outcomes of the different methods and discusses their advantages disadvantages As the first work to collect at
 one place the most important methods for solving fuzzy linear programming problems the book represents a useful reference
 guide for students and researchers providing them with the necessary theoretical and practical knowledge to deal with linear
 programming problems under uncertainty Multiple Criteria And Multiple Constraint Levels Linear Programming:
Concepts, Techniques And Applications Yong Shi,2001-06-28 This book introduces multiple criteria and multiple constraint
 levels linear programming MC2LP which is an extension of linear programming LP and multiple criteria linear programming
 MCLP In the last decade the author and a group of researchers from the USA China Korea Germany and Hungary have been
 working on the theory and applications of MC2LP problems This volume integrates their main research results ranging from
 theoretical bases to broad areas of real world applications The theoretical bases include the formulation of MC2LP integer
 MC2LP and MC2 transportation model fuzzy MC2LP and fuzzy duality of MC2LP optimal system designs and contingency
 plans MC2 decision support system and MC2 computer software development The application areas are accounting
 management information systems production planning and telecommunications management The book serves as a seminar
 text for both undergraduates and graduates who have a linear algebra or equivalent background For practitioners it will help
 in handling LP type problems in multiple decision making environment **Linear Programming in Industry** Sven
 Danø,1960 Fuzzy Linear Programming: Solution Techniques and Applications Seyed Hadi Nasseri,Ali
 Ebrahimnejad,Bing-Yuan Cao,2019-05-29 This book presents the necessary and essential backgrounds of fuzzy set theory and

linear programming particularly a broad range of common Fuzzy Linear Programming FLP models and related convenient solution techniques These models and methods belong to three common classes of fuzzy linear programming namely i FLP problems in which all coefficients are fuzzy numbers ii FLP problems in which the right hand side vectors and the decision variables are fuzzy numbers and iii FLP problems in which the cost coefficients the right hand side vectors and the decision variables are fuzzy numbers The book essentially generalizes the well known solution algorithms used in linear programming to the fuzzy environment Accordingly it can be used not only as a textbook teaching material or reference book for undergraduate and graduate students in courses on applied mathematics computer science management science industrial engineering artificial intelligence fuzzy information processes and operations research but can also serve as a reference book for researchers in these fields especially those engaged in optimization and soft computing For textbook purposes it also includes simple and illustrative examples to help readers who are new to the field
