Neural Network Design And The Complexity Of Learning:

Neural Network Design and the Complexity of Learning J. Stephen Judd, 1990 Using the tools of complexity theory Stephen Judd develops a formal description of associative learning in connectionist networks He rigorously exposes the computational difficulties in training neural networks and explores how certain design principles will or will not make the problems easier Judd looks beyond the scope of any one particular learning rule at a level above the details of neurons There he finds new issues that arise when great numbers of neurons are employed and he offers fresh insights into design principles that could guide the construction of artificial and biological neural networks The first part of the book describes the motivations and goals of the study and relates them to current scientific theory It provides an overview of the major ideas formulates the general learning problem with an eye to the computational complexity of the task reviews current theory on learning relates the book's model of learning to other models outside the connectionist paradigm and sets out to examine scale up issues in connectionist learning Later chapters prove the intractability of the general case of memorizing in networks elaborate on implications of this intractability and point out several corollaries applying to various special subcases Judd refines the distinctive characteristics of the difficulties with families of shallow networks addresses concerns about the ability of neural networks to generalize and summarizes the results implications and possible extensions of the work **Neural Network Design and the Complexity of Learning** is included in the Network Modeling and Connectionism series edited by Jeffrey Elman *Algorithmic Learning Theory* Naoki Abe, Roni Khardron, Thomas Zeugmann, 2001-11-07 This volume contains the papers presented at the 12th Annual Conference on Algorithmic Learning Theory ALT 2001 which was held in Washington DC USA during November 25-28 2001 The main objective of the conference is to provide an interdisciplinary forum for the discussion of theoretical foundations of machine learning as well as their relevance to practical applications The conference was co-located with the Fourth International Conference on Discovery Science DS 2001 The volume includes 21 contributed papers These papers were selected by the program committee from 42 submissions based on clarity significance originality and relevance to theory and practice of machine learning Additionally the volume contains the invited talks of ALT 2001 presented by Dana Angluin of Yale University USA Paul R Cohen of the University of Massachusetts at Amherst USA and the joint invited talk for ALT 2001 and DS 2001 presented by Setsuo Arikawa of Kyushu University Japan Furthermore this volume includes abstracts of the invited talks for DS 2001 presented by Lindley Darden and Ben Schneiderman both of the University of Maryland at College Park USA The complete versions of these papers are published in the DS 2001 proceedings Lecture Notes in Artificial Intelligence Vol 2226 *Machine Learning: From Theory to Applications* Stephen J. Hanson, Werner Remmeli, Ronald L. Rivest, 1993-03-30 This volume includes some of the key research papers in the area of machine learning produced at MIT and Siemens during a three year joint research effort It includes papers on many different styles of machine learning organized into three parts Part I theory includes three papers on theoretical

aspects of machine learning. The first two use the theory of computational complexity to derive some fundamental limits on what is efficiently learnable. The third provides an efficient algorithm for identifying finite automata. Part II artificial intelligence and symbolic learning methods includes five papers giving an overview of the state of the art and future developments in the field of machine learning, a subfield of artificial intelligence dealing with automated knowledge acquisition and knowledge revision. Part III neural and collective computation includes five papers sampling the theoretical diversity and trends in the vigorous new research field of neural networks, massively parallel symbolic induction, task decomposition through competition, phoneme discrimination, behavior based learning and self repairing neural networks.

Handbook of Approximation Algorithms and Metaheuristics Teofilo F. Gonzalez, 2018-05-15. *Handbook of Approximation Algorithms and Metaheuristics* Second Edition reflects the tremendous growth in the field over the past two decades. Through contributions from leading experts this handbook provides a comprehensive introduction to the underlying theory and methodologies as well as the various applications of approximation algorithms and metaheuristics. Volume 1 of this two volume set deals primarily with methodologies and traditional applications. It includes restriction relaxation, local ratio approximation schemes, randomization, tabu search, evolutionary computation, local search, neural networks and other metaheuristics. It also explores multi objective optimization, reoptimization, sensitivity analysis and stability. Traditional applications covered include bin packing, multi dimensional packing, Steiner trees, traveling salesperson scheduling and related problems. Volume 2 focuses on the contemporary and emerging applications of methodologies to problems in combinatorial optimization, computational geometry and graphs problems as well as in large scale and emerging application areas. It includes approximation algorithms and heuristics for clustering, networks, sensor and wireless communication, bioinformatics, search streams, virtual communities and more. About the Editor: Teofilo F. Gonzalez is a professor emeritus of computer science at the University of California Santa Barbara. He completed his Ph.D. in 1975 from the University of Minnesota. He taught at the University of Oklahoma, the Pennsylvania State University and the University of Texas at Dallas before joining the UCSB computer science faculty in 1984. He spent sabbatical leaves at the Monterrey Institute of Technology and Higher Education and Utrecht University. He is known for his highly cited pioneering research in the hardness of approximation for his sublinear and best possible approximation algorithm for k-tMM clustering, for introducing the open shop scheduling problem as well as algorithms for its solution that have found applications in numerous research areas as well as for his research on problems in the areas of job scheduling, graph algorithms, computational geometry, message communication, wire routing, etc. [Proceedings of the 1988 Workshop on Computational Learning Theory](#) David Haussler, Leonard Pitt, 1989. **Deep Learning Applications, Volume 4** M.
