Virtual Futures Joan Broadhurst Dixon, Eric Cassidy, 2005-07-20 Virtual Futures explores the ideas that the future lies in its ability to articulate the consequences of an increasingly synthetic and virtual world New technologies like cyberspace the internet and Chaos theory are often discussed in the context of technology and its potential to liberate or in terms of technophobia This collection examines both these ideas while also charting a new and controversial route through contemporary discourses on technology a path that discusses the material evolution and the erotic relation between humans and machines Virtual Futures brings together diverse fields such as cyberfeminism materialist philosophy

postmodern fiction computing culture and performance art with essays by Sadie Plant Stelarc and Manuel de Landa to name a few The collection heralds the death of humanism and the ride of posthuman pragmatism The contested zone of debate throughout these essays is the notion of the posthuman or the possibility of the cyborg as the free human Viewed by some writers as a threat to human life and humanism itself others in the collection describe the posthuman as a critical perspective that anticipates the next step in evolution the integration or synthesis of humans and machines organic life and technology This view of technology and information is heavily influenced by Anglo American literature especially cyberpunk Pynchon and Ballard as well as the materialist philosophies of Freud Deleuze and Haraway Virtual Futures provides analyses by both established theorists and the most innovative new voices working in conjunction between the arts and contemporary technology Future Societies John Hamilton, 2006-08-15 Introduces young readers to the world of science fiction
