Noback,David A. Ruggiero,Norman L. Strominger,Robert J. Demarest,2005 In this work the authors integrate three major basic themes of neuroscience to serve as an introduction and review of the subject **The Myth of Mirror Neurons** Gregory Hickok,2014-08-11 An essential reconsideration of one of the most far reaching theories in modern neuroscience and psychology In 1992 a group of neuroscientists from Parma Italy reported a new class of brain cells discovered in the motor cortex of the macaque monkey These cells later dubbed mirror neurons responded equally well during the monkey's own motor actions such as grabbing an object and while the monkey watched someone else perform similar motor actions Researchers speculated that the neurons allowed the monkey to understand others by simulating their actions in its own brain Mirror neurons soon jumped species and took human neuroscience and psychology by storm In the late 1990s theorists showed how the cells provided an elegantly simple new way to explain the evolution of language the development of human empathy and the neural foundation of autism In the years that followed a stream of scientific studies implicated mirror neurons in everything from schizophrenia and drug abuse to sexual orientation and contagious yawning In *The Myth of Mirror Neurons* neuroscientist Gregory Hickok reexamines the mirror neuron story and finds that it is built on a tenuous

foundation a pair of codependent assumptions about mirror neuron activity and human understanding Drawing on a broad range of observations from work on animal behavior modern neuroimaging neurological disorders and more Hickok argues that the foundational assumptions fall flat in light of the facts He then explores alternative explanations of mirror neuron function while illuminating crucial questions about human cognition and brain function Why do humans imitate so prodigiously How different are the left and right hemispheres of the brain Why do we have two visual systems Do we need to be able to talk to understand speech What s going wrong in autism Can humans read minds The Myth of Mirror Neurons not only delivers an instructive tale about the course of scientific progress from discovery to theory to revision but also provides deep insights into the organization and function of the human brain and the nature of communication and cognition

*Handbook of Amygdala Structure and Function* Janice H. Urban,J. Amiel Rosenkranz,2020-03-31 **Handbook of Amygdala Structure and Function** Volume 26 provides an updated overview on the functional neuroanatomy of amygdala nuclei with an emphasis on interconnections basolateral central amygdala medial amygdala and their integration into related networks circuits prefrontal cortex bed nucleus nucleus accumbens The design of this volume builds upon the foundations of functional neural circuits and the corresponding cellular electrophysiology important for the homeostatic control of amygdala function This volume contains a dedicated section on the anatomical organization of the amygdala nuclei emphasizing the role of neurotransmitters and neuropeptides that integrate signals and regulate behavior Additional chapters discuss cellular physiology plasticity and the integration of electrical signals that contribute to neural activity The final section of the book connects the role of amygdala dysfunction and the development of disorders in human health and disease Emphasizes a comparative and multidisciplinary approach on the topic of the amygdala Discusses in detail the role of amygdala dysfunction and the development of disorders in human health and disease Examines the current state of research in cellular physiology plasticity and the integration of electrical signals Includes a dedicated section on neuropeptides neurotransmitters and cannabinoids that links to behavior control

and methods necessary to pursue interdisciplinary research in a fascinating field intersecting linguistic and neuroscience It focuses on neurophysiological methods and applications useful to track the high speed and rapid temporal dynamics of neural activity involved in language and speech The chapters in this book are organized into four parts Part One discusses neural principles and tools for an effective approach to the field of investigation Part Two looks at the issues and perspectives concerned with the use of a range of neurophysiological technologies to investigate the neural computations of language and speech processes Part Three focuses on an in depth exploration of the neural processes associated with the main types of linguistic information ranging from phonemes and prosody to syntax pragmatics and figurative language Lastly Part Five explores the phenomena that goes beyond the segments of basic linguistic units In the Neuromethods series style chapters include the kind of detail and key advice from the specialists needed to get successful results in your laboratory Cutting edge and thorough Language Electrified Principles Methods and Future Perspectives of Investigation is a valuable resource that offers the necessary tool box for all researchers and scientists interested in the challenging field of the neurophysiology of language and speech     *Neural Information Processing* Teddy Mantoro, Minho Lee, Media Anugerah Ayu, Kok Wai Wong, Achmad Nizar Hidayanto, 2021-12-06 The four volume proceedings LNCS 13108 13109 13110 and 13111 constitutes the proceedings of the 28th International Conference on Neural Information Processing ICONIP 2021 which was held during December 8-12 2021 The conference was planned to take place in Bali Indonesia but changed to an online format due to the COVID 19 pandemic The total of 226 full papers presented in these proceedings was carefully reviewed and selected from 1093 submissions The papers were organized in topical sections as follows Part I Theory and algorithms Part II Theory and algorithms human centred computing AI and cybersecurity Part III Cognitive neurosciences reliable robust and secure machine learning algorithms theory and applications of natural computing paradigms advances in deep and shallow machine learning algorithms for biomedical data and imaging applications Part IV Applications
