Neurological and Neurosurgical Intensive Care Allan H. Ropper, 1993. The standard text and reference on neurological and neurosurgical intensive care is now in its Fourth Edition, thoroughly revised to incorporate the latest therapeutic advances and insights from the most recent clinical trials. A team of distinguished neurointensivists offers practical state-of-the-art guidelines for managing the wide range of problems arising in postoperative neurosurgical care and care of patients with acute neurological diseases. This edition focuses sharply on the details of therapeutics. The authors from leading neurointensive care units have written the book collectively, giving it more cohesiveness and more of an authoritative consensus voice than previous multiauthored editions. *Neurological & Neurosurgical Intensive Care* Allan H. Ropper, 2012-02-25. This revision, the fifth, contains 19 additional chapters as a result of the expansion of the field of neurocritical care. The most significant addition to the book is the 6 chapter section on neuromonitoring where significant scientific advances have occurred. The authors plan to increase the number of tables and figures and will use diagrams to present treatment pathways. *Intensive Care in Neurology and Neurosurgery* Daniel Agustin Godoy, Gustavo Rene Piñero, 2013-03. Neuromonitoring is the tool of trade in intensive care and should incorporate cutting edge technology with patience, repeated clinical observation, careful identification of neuroworsening. The aim of the book is to be of practical use and to assist the clinical practice of the busy physician. The clinical examination belongs to the introductory section of the book and an abundance of technology with specific emphasis on the importance of intracranial pressure comes in the following parts. Since the patient with an injured brain can have chances only if other organs and systems as the lungs and the acid base equilibrium etc are preserved, a section of the book covers the interactions between the affected brain and other organs. The way the brain reacts to different insults has common aspects as inflammatory responses, edema etc, but also specific features. Sections five to nine summarize the most relevant pathologies from ischemic to hemorrhagic lesions, trauma, tumors etc, and also mentions new comers as the specific problems related to the expanding field of neuroradiological interventions. Finally, neurointensive care does not exist without knowledgeable nurses. The intracranial pressure measurement starts or unfortunately ends with a catheter well maintained and that becomes vital when the drainage of hydrocephalus is concerned. Dealing with patients with severe brain damage has plenty of ethical implications up to the problems related to brain death and organ donation. This book is published in two volumes. *The NeuroICU Book* Kiwon Lee, 2012-04-19. The goal of neurological critical care is to rapidly deliver acute medical therapies and appropriate interventions through effective monitoring of both neurological and end organ function. The NeuroICU Book puts that goal within the reach of every

neurologist and critical care specialist Combining the latest clinical perspectives in critical care medicine neurology and neurosurgery this comprehensive evidence based text standardizes neurocritical care and takes you through the rationale for those standards Filled with detailed case studies and featuring a question and answer format the book not only builds competency in recognizing acute changes in neurological function but also addresses all organ insufficiencies and failures reflecting the real life challenges in the modern neuro ICU Publisher s website [The Clinical Practice of Critical Care Neurology](#) Eelco F.
